taking place as biotechnology and information technology systems continue to evolve The chapters in this book approach the complex history of this topic and the issues it raises from a number of directions It begins by examining the shared features and spaces of biotechnology and digital information technologies as meta technologies qualitatively distinct from both the tools first used in the premodern era and the industrial technologies that characterized modernity Next the book explores what is and is not useful in treating the types of information processed by the two meta technologies through a shared conceptual lens and looks at issues raised by the ownership of genetic and digital information The final chapters are concerned with relationships between information and power Defining a future research agenda for communication scholarship this work is beneficial to scholars and students in science communication cultural studies information technologies and sociology
