War Over Water Conflict Over Trans Boundary Waters:

War Over Water Firas Thalji, 2014-11-05 Water situation in Middle East is hard and difficult to make sense out of it indicators of shortage are hard to examine and argue Talking about water in Middle East has many dimensions social environmental religious and political What can be drawn from all of this is that water in Middle East is a highly sensitive political issue Water poses the biggest challenge of all natural resources especially when it comes to the Middle East an area known for its shortage and limited fresh water resources Water shortage is not the only reason for causing water conflicts fair equitable agreements plays an essential role in the water conflict especially among states sharing trans boundary waters Water war as a concept may not mesh with the conventional construct of warfare Water wars can be waged and won by nonmilitary means such as by reengineering trans boundary flows But when military force has been employed by any country to change the regional water map this research attempt to show that merely water conflicts in Middle East are political issues Hydro politics is quickly becoming a subject of crucial importance within the general field of conflict studies and environmental politics This research is motivated by the Middle East water conflict which exhibits many aspects of other conflicts over natural resources around the world Particularly the Jordanian Israeli conflict is very intriguing as it incarnates a situation in which conflicting representations of fresh water resources coupled with power structure imbalance have created tension injustice instability and resulted in a long lasting conflict The conflict over water facing the nations in the Middle East today will become even more serious over the next coming years unless something is done in proper time future Populations are growing and the standard of living is expected to increase as well Averting water conflicts demands fair treaties cooperation water sharing and not dividing Joint Fact Finding Transparency and clarity are the most essential elements Despite the ubiquity of transnational basins the number of genuine water sharing treaties in the world unfortunately remains remarkably small Most trans boundary river in fact lacks any treaty based arrangements to promote cooperation between co riparian states

Transboundary Water Management Anton Earle, Anders Jägerskog, Joakim Öjendal, 2013-10-18 The management of water resources across boundaries whether sub national or international is one of the most difficult challenges facing water managers today The upstream exploitation or diversion of groundwater or rivers can have devastating consequences for those living downstream and transboundary rivers can provide a source of conflict between nations or states particularly where water resources are scarce Similarly water based pollution can spread across borders and create disputes and a need for sound governance This book is the first to bring together in a concise and accessible way all of the main topics to be considered when managing transboundary waters It will raise the awareness of practitioners of the various issues needed to be taken into account when making water management decisions and provide a practically based overview for advanced students The authors show clearly how vital it is to cooperate effectively over the management of shared waters to unlock their contribution to regional sustainable development The book is largely based on

a long running and tested international training programme run by the Stockholm International Water Institute and Ramboll Natura and supported by the Swedish International Development Co operation Agency Sida where the respective authors have presented modules on the programmes It addresses issues not only of conflict but also of managing power asymmetries benefit sharing stakeholder participation international water law environmental water requirements and regional development It will be particularly useful for those with a background in hydrology or engineering who wish to broaden their management skills
