

Water in the Atmosphere (pages 432–438)

Introduction (page 432)

Key Concept: Water is always moving between the atmosphere and Earth's surface.

- The **water cycle** is the movement of water between the atmosphere and Earth's surface.
- Water vapor enters the air through evaporation. **Evaporation** is when a liquid becomes a gas. Liquid water evaporates to become water vapor.
- The water cycle includes all forms of precipitation, including rain and snow. Water moves from the atmosphere to Earth's surface by precipitation.

Answer the following questions. Use your textbook and the ideas above.

1. Water moves between the atmosphere and Earth's surface through the _____ cycle.
2. Circle the letter of the way that water enters the atmosphere.
 - a. evaporation
 - b. precipitation
 - c. condensation

Humidity (pages 433–434)

Key Concept: Relative humidity can be measured with an instrument called a psychrometer.

- **Humidity** is a measure of how much water vapor is in the air. Warm air can hold more water vapor than cold air.

Geochemistry Roy Chester,2012-12-06 The past two or three decades have seen many important advances in our knowledge of the chemistry physics geology and biology of the oceans It has also become apparent that in order to understand the manner in which the oceans work as a chemical system it is necessary to use a framework which takes account of these

interdisciplinary advances Marine geochemistry has been written in response to the need for a single state of the art text that addresses the subject of treating the sea water sediment and rock reservoirs as a unified system In taking this approach a process orientated framework has been adopted in which the emphasis is placed on identifying key processes operating within the unified ocean In doing this particular attention has been paid to making the text accessible to students from all disciplines in such a way that future advances can readily be understood I would like to express my thanks to those people who have helped with the writing of this volume In particular I wish to put on record my sincere appreciation of extremely helpful suggestions made by Professor John Edmond FRS In addition I thank Dr S Rowlatt for his comments on the sections covering the geochemistry of oceanic sediments and Dr G Wolff for his invaluable advice on the organic geochemistry of biota water and sediments It is a great pleasure to acknowledge the help of Dr K J T
