The Vegetation And Physiography Of Sumatra Geobotany:

The Vegetation and Physiography of Sumatra Yves Laumonier, 1997-02-28 Audience An extremely important landmark study of Malaysian vegetation of interest to students and professionals in plant science tropical botany ecology biogeography climatology physical geography and remote sensing as applied to vegetation science *Ecology of Indonesian Papua Part One* Andrew J. Marshall, Bruce M. Beehler, 2011-07-19 The Ecology of Papua provides a comprehensive review of current scientific knowledge on all aspects of the natural history of western Indonesian New Guinea Designed for students of conservation environmental workers and academic researchers it is a richly detailed text dense with biogeographical data historical reference and fresh insight on this complicated and marvelous region We hope it will serve to raise awareness of Papua on a global as well as local scale and to catalyze effective conservation of its most precious natural assets New Guinea is the largest and highest tropical island and one of the last great wilderness areas remaining on Earth Papua the western half of New Guinea is noteworthy for its equatorial glaciers its vast forested floodplains its imposing central mountain range its Raja Ampat Archipelago and its several hundred traditional forest dwelling societies One of the wildest places left in the world Papua possesses extraordinary biological and cultural diversity Today Papua's environment is under threat from growing outside pressures to exploit its expansive forests and to develop large plantations of oil palm and biofuels It is important that Papua's leadership balance economic development with good resource management to ensure the long term well being of its culturally diverse populace **Asia-Pacific roadmap for primary forest conservation** Laumonier, Y., Azzu, N., Adzan, G., Narulita, S., Khikmah, F., Meybeck, A., Pingault, N., Gitz, V., 2022-07-31 **Asia-Pacific roadmap for primary forest conservation** Laumonier, Y., Azzu, N., Azdan, G., Narulita, S., Khikmah, F., Meybeck, A., Pingault, N., Gitz, V., 2022-08-12 The purpose of the roadmap is to delineate and inform the process by which decision makers and actors can evaluate the status diversity and trends of primary forests in the region identify priority areas for primary forest conservation assess the threats they face and explore possible ways to address them This report suggests a practical process in four steps through which the recommendations can be articulated at different scales from regional to local and adapted to the specific context priorities and needs of various forest types countries and categories of actors *The National Parks of Indonesia* Jatna Supriatna, Chris Margules, 2025-08-30 This book contains information on geographic location and park size climate topography history of each park and biodiversity and ecosystems It also contains information on local communities adjacent to each park or in some cases within the parks and their culture tourism opportunities access tourist facilities nearby and how to find the park office to get a visitor's permit The 55 parks currently declared span the length and breadth of the country They provided the last remaining refuges for many of Indonesia's charismatic species such as tigers elephants rhinoceros and orangutans **Tropical Fire Ecology** Mark Cochrane, 2010-04-11 The tropics are home to most of the world's biodiversity and are currently the frontier for human settlement Tropical ecosystems are being converted to agricultural

and other land uses at unprecedented rates Land conversion and maintenance almost always rely on fire and because of this fire is now more prevalent in the tropics than anywhere else on Earth Despite pervasive fire human settlement and threatened biodiversity there is little comprehensive information available on fire and its effects in tropical ecosystems Tropical deforestation especially in rainforests has been widely documented for many years Forests are cut down and allowed to dry before being burned to remove biomass and release nutrients to grow crops However fires do not always stop at the borders of cleared forests Tremendously damaging fires are increasingly spreading into forests that were never evolutionarily prepared for wild fires The largest fires on the planet in recent decades have occurred in tropical forests and burned millions of hectares in several countries The numerous ecosystems of the tropics have differing levels of fire resistance resilience or dependence At present there is little appreciation of the seriousness of the wild fire situation in tropical rainforests but there is even less understanding of the role that fire plays in the ecology of many fire adapted tropical ecosystems such as savannas grasslands and other forest types

Shifting Cultivation Policies Malcolm Cairns, 2017-11-13

Shifting cultivation supports around 200 million people in the Asia Pacific region alone It is often regarded as a primitive and inefficient form of agriculture that destroys forests causes soil erosion and robs lowland areas of water These misconceptions and their policy implications need to be challenged Swidden farming could support carbon sequestration and conservation of land biodiversity and cultural heritage This comprehensive analysis of past and present policy highlights successes and failures and emphasizes the importance of getting it right for the future This book is enhanced with supplementary resources The addendum chapters can be found at www.cabi.org/openresources 91797
