Uber Luxury Cars San Jose:

Onlearning: How disruptive education reinvents learning José Cláudio Securato, 2020-06-23 Onlearning How disruptive education reinvents learning brings a new concept which appears as a response to the desire for change in education specifically in education for executives in the face of the exponential and out of sync transformations of society which happen through technology and revolutionize organizations people's lives and customs with the aim of extracting the best from this evolution and expanding it in a maximized way into executive learning The work consists of three parts Part I deals with the history of work oriented education executive education and business schools It shows how the teaching of Administration was formalized mainly by business schools and what learning and cognition methodologies were developed by the various thinkers of the 19th and 20th centuries whose models have repercussions until today Part II outlines the scenario in which technology and digital transformation are consolidated as fundamental means for creating disruption in the most diverse areas of knowledge and industry sectors It approaches how Clayton Christensen's theory of disruptive strategy defies the logic of traditional innovation as well as what are the effects of new technologies on the economy society and people's lives and how fast are they advancing to become accessible radically transforming reality Finally Part III deals with education and Saint Paul's disruptive proposal for executive education Onlearning It reflects on the need for education to concretely impact technological evolution in a broad way in its economic and social aspect It ends by presenting 20 conclusions on Onlearning featuring objectives actions and projections for the future of education based on the proposal to reinvent education through the resources that technology and digital transformation make available to everyone Strategic International Management Dirk Morschett, Hanna Schramm-Klein, Joachim Zentes, 2015-01-27 A compact overview of the most relevant concepts and developments in International Management The various strategy concepts of internationally active companies and their implementation in practice are the core of this book The authors describe the particularities of international value chain activities and management functions and offer a thorough understanding of how Production Sourcing Research Development Marketing Human Resource Management and Controlling have to be designed in an international company and what models are available to understand those activities in an international context In 23 lessons a comprehensive overview of all key issues is given Each lesson is accompanied by a case study from an international company to facilitate the understanding of all important factors involved in strategic international management In this third edition all chapters have been updated all case studies revised new chapters and recent data were integrated *Unsettled Impacts of Integrating Automated Electric Vehicles into a Mobility-as-a-Service Ecosystem and Effects on Traditional Transportation and Ownership* Joachim Taiber, Raivo Sell, 2019-12-20 The current business model of the automotive industry is based on individual car ownership yet new ridesharing companies such as Uber and Lyft are well capitalized to invest in large commercially operated on demand mobility service vehicle fleets Car manufacturers like Tesla want to incorporate personal car owners into part time fleet

operation by utilizing the company's fleet service. These robotaxi fleets can be operated profitably when the technology works in a reliable manner and regulators allow driverless operation. Although Mobility as a Service (MaaS) models of private and commercial vehicle fleets can complement public transportation models, they may contribute to lower public transportation ridership and thus higher subsidies per ride. This can lead to inefficiencies in the utilization of existing public transportation infrastructure. MaaS platforms can also cause a reduced reliance on parking infrastructure, e.g., street parking lanes and parking garages, which can contribute to an improvement in overall traffic flow and a reduction in capital investment for commercial and residential real estate development. Urban planning can be better centered around the true mobility needs of the citizens without sacrificing valuable space for vehicles that are inactive most of the time. A key challenge is the transition phase where traditional forms of car ownership and transportation coexist with new forms of mobility services before true MaaS platforms are fully optimized. Another fundamental issue is determining the true cost of car ownership and establishing ideal cost structures for on-demand mobility services in order to replace the need of owning a car. This needs to occur without compromising subsidized public transportation, which provides affordable transportation for low-income groups.

NOTE: SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry. The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues. SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny.
