

Universal Fire Transmitter (UFT)

Document Number: 466-1940 Rev. A PRELIMINARY
January 2002

About this Document

This document describes how to install, program and test the Universal Fire Transmitter (UFT).

Product Summary

The Universal Fire Transmitter is a supervised, battery powered transmitter designed to be connected to externally wired fire detection equipment. The transmitter reports signals from the fire detection equipment to the panel via wireless signals.

The UFT sends supervision transitions to the panel approximately every 64 minutes. An 4.7k Ohm end-of-line resistor must be installed between the UFT and the fire detection equipment for proper supervision of the UFT.

The UFT is equipped with a cover tamper and a reed switch designed to provide wall tamper protection.

Note The 3.6-volt lithium battery cannot be replaced by installers or users. If you receive a low battery report, you must return the sensor to Interlogix for replacement.
