Design of CMOS RFIC Ultra-Wideband Impulse Transmitters and Receivers Cam Nguyen, Meng Miao, 2017-03-21 This book presents the design of ultra wideband UWB impulse based transmitter and receiver frontends operating within the 3.1-10.6 GHz frequency band using CMOS radio frequency integrated circuits RFICs CMOS RFICs are small cheap low power devices better suited for direct integration with digital ICs as compared to those using III V compound semiconductor devices CMOS RFICs are thus very attractive for RF systems and in fact the principal choice for commercial wireless markets The book comprises seven chapters The first chapter gives an introduction to UWB technology and outlines its suitability for high resolution sensing and

high rate short range ad hoc networking and communications The second chapter provides the basics of CMOS RFICs needed for the design of the UWB RFIC transmitter and receiver presented in this book It includes the design fundamentals lumped and distributed elements for RFIC layout post layout simulation and measurement The third chapter discusses the basics of UWB systems including UWB advantages and applications signals basic modulations transmitter and receiver frontends and antennas The fourth chapter addresses the design of UWB transmitters including an overview of basic components design of pulse generator BPSK modulator design and design of a UWB tunable transmitter Chapter 5 presents the design of UWB receivers including the design of UWB low noise amplifiers correlators and a UWB 1 receiver Chapter 6 covers the design of a UWB uniplanar antenna Finally a summary and conclusion is given in Chapter 7

An Assessment of Potential Health Effects from Exposure to PAVE PAWS Low-Level Phased-Array Radiofrequency Energy National Research Council, Division on Earth and Life Studies, Board on Radiation Effects Research, Committee to Assess Potential Health Effects from Exposures to PAVE PAWS Low-Level Phased-Array Radiofrequency Energy, 2005-07-09 PAVE PAWS is a phased array warning system designed to detect and track sea launched and intercontinental ballistic missiles operated on Cape Cod since 1979 by the U S Air Force Space Command In 1979 the National Research Council issued two reports to address concerns from Cape Cod residents about the safety and possible health effects of the radiofrequency energy from the radar Following up on the 1979 report the new report finds no evidence of adverse health effects to Cape Cod residents from long term exposure to the PAVE PAWS radar The report specifically investigated whether the PAVE PAWS radar might be responsible in part for the reported higher rates of certain cancers in

the area but concludes there is no increase in the total number of cancers or in specific cancers of the prostate breast lung or colon due to radiation exposure from PAVE PAWS The report did find in the scientific literature a few biological responses to radiofrequency exposures that were statistically significant Such responses do not necessarily result in adverse health effects but the report recommends additional studies to better discern the significance if any of those findings **2002 IEEE**
