Valuing Climate Change The Economics Of The Greenhouse:

Valuing Climate Change Samuel Fankhauser, 2013-10-11 Within only a few years global warming has emerged from scientific speculation into an environmental threat of worldwide concern Yet the scientific community remains uncertain as to the long term trends and effects of climate change and this uncertainty has been seized on as justification for inaction by an international community reluctant to bear the costs of policies to reduce greenhouse gas emissions *Valuing Climate Change* presents concrete economic evidence of the need for action Fankhauser assesses the costs of a doubling of GHG emissions to be a significant percentage of gross world product a figure which he then compares to the costs of reducing emissions In his comparison he looks at regional as well as global estimates of damage and takes account of the non climate change benefits of GHG reductions such as a switch in the energy sector to cleaner technologies or renewable fuels and the impacts on transport with reduced congestion and improved air quality It is clear that the stakes are high and Fankhauser believes that tougher targets may be needed than those set out in the Framework Convention on Climate Change He assesses the optimum policy responses to GHG reduction the likely instruments for achieving it and the potential for international cooperation in dealing with the problems This is a major contribution to the rapidly changing debate on global warming [Climate Change](#)

Michael A. Toman, 2017-11-30 Over the years a large and growing literature on the economics of climate change has developed Within this volume the contributors have included a wide range of journal essays that consider the impact of climate change on specific sectors goods and services the costs and benefits of greenhouse gas GHG mitigation and policy design for mitigation including both domestic instruments and issues related to international agreements **Assessing the Costs of Adaptation to Climate Change** Martin L. Parry, 2009 **Economics and Policy Issues in Climate Change**

William D. Nordhaus, 2013-11-26 Although the negotiation of the Kyoto Protocol focused world attention on the global climate it was just one step in the ongoing process of addressing climate change in all its facets Research by the UN s Intergovernmental Panel on Climate Change IPCC has been ongoing since 1988 An extensive IPCC Working Group report published in 1995 examined the economic and social aspects of climate change In this volume eminent analysts assess that IPCC report and address the questions that emerge from it The result is an instructive and cogent look at the realities of climate change and some methods and difficulties of dealing with them William Nordhaus s introduction establishes the context for the book It provides basic scientific background on climate change reviews the IPCC s activities and explains the genesis of the analyses Subsequent contributions fall into two categories Early chapters review analytical issues critical to social and economic understanding of climate change A second set of chapters address specific economic questions surrounding climate change policy The result is an original and significant contribution to the evolving debate on this crucial hot button topic **Valuing the Environment in Developing Countries** David Pearce, Corin Pearce, Charles

Palmer, 2002-01-01 The substantial and growing interest in the monetary valuation of preferences for environmental

improvement and against environmental damage has prompted a demand for case studies illustrating methodologies and applications of valuation techniques In this book the first of two volumes the authors provide detailed case studies of valuation techniques that have been used in developing countries They demonstrate that valuation works and that it can yield significant insights into policy relevant issues regarding conservation and economic development The authors address a whole range of environmental issues under the broad themes of water and air quality biological diversity and forest functions The economic approaches covered include contingent valuation hedonic property prices travel cost methodologies and benefits transfer They also go on to look at the idea of extending national accounts to reflect changes in environmental assets Examples of the varied and interesting case studies include valuing improvements to sanitation in Malaysia the value of visits to game parks in South Africa and tropical forest values in Mexico They highlight how valuation techniques can be applied often with limited resources to critical development issues Academics and practitioners of environmental economics will draw great value from this unique and original work as will the many multilateral and bilateral aid agencies The book will also prove a valuable addition to graduate and undergraduate courses in environmental economics where there is a need for case material

Rethinking Risk and the Precautionary Principle Julian Morris, 2000-09-19 Rethinking Risk and the Precautionary Principle challenges the claim that the precautionary principle is an appropriate guide to public policy decision making in the face of uncertainty The precautionary principle is frequently invoked as a justification for regulating human activities From bans on the use of growth hormones in cattle to restrictions on children's playground activities precautionary thinking seems to be taking over our lives As the contributors to this book show such an approach is of dubious utility and may even be counterproductive This is a timely and important contribution to the debate on how to manage risk in the modern world The editor Julian Morris is Director of the Environment and Technology Programme at the Institute of Economic Affairs in London He has written widely on issues relating to environmental protection and technological development Up to date discussion of current issues and scientific controversies Challenges the claim that the precautionary principle is an appropriate guide to public policy decisions

Climate Change Policy C. J. Jepma, Mohan Munasinghe, 1998 This book concisely sets out the main issues and risks involved in attempting to mitigate climate change

Global Warming Frances Drake, 2014-05-01 This topical textbook provides a bridge between technical and popular texts on global warming within the broader context of climate change Written at an introductory level it explains the interacting components of this system what the greenhouse effect is and how scientists seek to predict climate change It makes accessible the technical and heavy science literature to the non science student Global warming is one of the major environmental problems facing the world today But it is an issue surrounded by great contention because it is based largely on scientific prediction and has yet to be proven Opinion is divided regarding whether global warming will occur and if it does what the effects will be In order to appreciate the uncertainties surrounding this issue it is necessary to understand the workings of the climate

system and the methods by which scientists seek to predict climate change Global Warming aims to make accessible the heavily technical literature to the non science student providing a bridge between the highly scientific and the popular non academic texts Placing global warming within the broader context of climate change this textbook details the interacting components of the climatic system reviewing the importance of changing carbon dioxide levels for the evolution of the Earth's atmosphere and climate Utilising observed and modelled data it presents the latest evidence for and against global warming whilst highlighting the difficulties involved with analysing both types of data and introducing areas of controversy within research The book also addresses the important problem of making policy decisions for the future based on the uncertain science of global warming

Nature's Services Gretchen Cara Daily, 2012-09-26 Life itself as well as the entire human economy depends on goods and services provided by earth's natural systems The processes of cleansing recycling and renewal along with goods such as seafood forage and timber are worth many trillions of dollars annually and nothing could live without them Yet growing human impacts on the environment are profoundly disrupting the functioning of natural systems and imperiling the delivery of these services Nature's Services brings together world renowned scientists from a variety of disciplines to examine the character and value of ecosystem services the damage that has been done to them and the consequent implications for human society Contributors including Paul R Ehrlich Donald Kennedy Pamela A Matson Robert Costanza Gary Paul Nabhan Jane Lubchenco Sandra Postel and Norman Myers present a detailed synthesis of our current understanding of a suite of ecosystem services and a preliminary assessment of their economic value Chapters consider major services including climate regulation soil fertility pollination and pest control philosophical and economic issues of valuation case studies of specific ecosystems and services implication of recent findings and steps that must be taken to address the most pressing concerns Nature's Services represents one of the first efforts by scientists to provide an overview of the many benefits and services that nature offers to people and the extent to which we are all vitally dependent on those services The book enhances our understanding of the value of the natural systems that surround us and can play an essential role in encouraging greater efforts to protect the earth's basic life support systems before it is too late

Welfens, 2001-08-15 Internationalization of the economy accelerated at the turn of the century Growing national regional and global environmental problems associated with globalization present new challenges for policy makers and international cooperation Crucial problems concern air pollution environmental problems from trade and transportation and global warming This book based on theoretical and empirical analysis comes up with new and innovative policy options including proposals related to the Kyoto protocol The State of Economics, the State of the World Kaushik Basu, David Rosenblatt, Claudia Sepulveda, 2025-02-04 Leading economists address the ongoing challenges to economics in theory and practice in a time of political and economic crises More than a decade of financial crises sovereign debt problems political conflict and rising xenophobia and protectionism has left the global economy unsettled and the ability of economics as a discipline to account for episodes of volatility uncertain In this book leading economists consider the state of their discipline in a world of ongoing economic and political crises The book begins with three sweeping essays by Nobel laureates Kenneth Arrow in one of his last published works Amartya Sen and Joseph Stiglitz that offer a summary of the theoretical foundations of modern economics the twin pillars of general equilibrium theory and welfare economics Contributors then turn to macroeconomic stabilization and growth and finally new areas of research that depart from traditional theory methodology and concerns climate change behavioral economics and evolutionary game theory The 2019 Nobel Prize laureates Abhijit Banerjee Esther Duflo and Michael Kremer contribute a paper on the use of randomized control trials in development

economics *Air Pollution in the 21st Century* T. Schneider, 1999-03-12 This symposium was jointly organized by the United States Environmental Protection Agency and The Netherlands Ministry of Housing Spatial Planning and the Environment These proceedings will provide a stimulus for taking up the challenges of environmental policy development in the 21st century and will contribute to continuing co operation Clean air is a basic condition for health Air pollution aggravates respiratory problems leading to increased sickness absenteeism increased use of health care services and even premature mortality Air pollution is under intensive discussion in the United States and Europe In The Netherlands a wide range of policy instruments have been formulated which have reduced air pollution For example since 1975 sulphur dioxide and lead emissions have been reduced However emission reduction figures for many other substances are more modest Many air pollution problems persist because progress in countering these problems is nullified by growth in the economy and traffic Another important target is the prevention of climate change The international community is agreed that the increasing concentration of greenhouse gases in the atmosphere has led to a gradual increase in the earth s temperature In terms of the environmental consequences and social implications the greenhouse problem surpasses all other air quality problems Across Europe strategies are being developed to reduce acidification and photochemical air pollution An air emission ceiling for each country in the European Union is being agreed In the area of climate change there is good co operation between the United States The Netherlands and other EU Members States in the ongoing global negotiations This is the start of a new movement In the last century economies and societies developed through increasing human productivity In the next century they must develop through increasing the productivity of fuel and natural resources **Routledge Handbook of Energy**

Economics Uğur Soytaş, Ramazan Sarı, 2019-09-23 Energy consumption and production have major influences on the economy environment and society but in return they are also influenced by how the economy is structured how the social institutions work and how the society deals with environmental degradation The need for integrated assessment of the relationship between energy economy environment and society is clear and this handbook offers an in depth review of all four pillars of the energy economy environment society nexus Bringing together contributions from all over the world this handbook includes sections devoted to each of the four pillars Moreover as the financialization of commodity markets has made risk analysis more complicated and intriguing the sections also cover energy commodity markets and their links to other financial and non financial markets In addition econometric modeling and the forecasting of energy needs as well as energy prices and volatilities are also explored Each part emphasizes the multidisciplinary nature of the energy economics field and from this perspective chapters offer a review of models and methods used in the literature The Routledge Handbook of Energy Economics will be of great interest to all those studying and researching in the area of energy economics It offers guideline suggestions for policy makers as well as for future research Pathways to Industrialization in the Twenty-First Century Adam Szirmai, Wim Naudé, Ludovico Alcorta, 2013-02-28 This book deals with the importance of industrialization and

the development of manufacturing in the economic development process It focuses specifically on new challenges such as global value chains the rise of China climate change and the role of state versus private sector entrepreneurs in forging appropriate industrial policies *How Much is Clean Air Worth?* Ari Rabl, Joseph V. The Oxford Handbook of Climate Change and Society John S. Dryzek, Richard B. Norgaard, David Schlosberg, 2011-08-18 Climate change presents perhaps the most profound challenge ever confronted by human society This volume is a definitive analysis drawing on the best thinking on questions of how climate change affects human systems and how societies can do and should respond Key topics covered include the history of the issues social and political reception of climate science the denial of that science by individuals and organized interests the nature of the social disruptions caused by climate change the economics of those disruptions and possible responses to them questions of human security and social justice obligations to future generations policy instruments for reducing greenhouse gas emissions and governance at local regional national international and global levels *Combating Climate Change* Manjit S. Kang, Surinder S. Banga, 2013-03-26 The effects of climate change can already be felt around the world and they will likely impact all facets of human civilization from health livelihood security agricultural production and shelter to international trade Since anthropogenic factors are mainly to blame for the current trends in global warming human intervention will be necessary to mitigate it With 17 authoritative chapters *Combating Climate Change An Agricultural Perspective* outlines a framework for preparing agriculture for climate change presenting the causes and consequences of climate change and possible remediation measures With contributions from internationally recognized scientists the chapters cover global food security adaptation of agriculture to fulfill its greenhouse gas emissions mitigation potential economic aspects of climate change the soil organic carbon pool the need for agroecological intelligence and the development of nutrient use efficient crops The text also addresses genetic mitigation of climate change effects through the development of climate resilient crops and the use of genetic and genomic resources to develop highly productive crop cultivars as well as the conservation of native agroecosystems Expert contributors discuss the impacts of climate change on plant pathogens and plant disease as well as on insects and crop losses They address abiotic stress resistance conservation tillage as a mitigation strategy and more The final chapter demonstrates the practical use of the WorldClim and DIVA software for modeling current and future climates using Timor Leste and India as examples Covering a broad range of issues related to climate change and agriculture this book brings together ideas for environmentally friendly technologies and opportunities to further increase and stabilize global agricultural productivity and ensure food security in face of mounting climate challenge *Climate Change and Developing Countries* Nijavalli H. Ravindranath, Jayant A. Sathaye, 2005-12-16 Among global environmental issues climate change has received the largest attention of national and global policy makers researchers industry multilateral banks and NGOs Climate change is one of the

most important global environmental problems with unique characteristics It is global long term up to several centuries and involves complex interactions between climatic environmental economic political institutional and technological pressures It is of great significance to developing countries as all the available knowledge suggests that they and particularly their poorer inhabitants are highly vulnerable to climate impacts The projected warming of 1.4 to 5.8 °C by 2100 and the related changes in rainfall pattern rise in sea level and increased frequency of extreme events such as drought hurricanes and storms are likely to threaten food security increase fresh water scarcity lead to decline in biodiversity increase occurrence of vector borne diseases cause flooding of coastal settlements etc Recognizing the potential threat of severe disruptions the United Nations Conference on Environment and Development was organized in 1992 in Rio de Janeiro Brazil to begin to address ways to reduce these impacts which led to the formulation of the UN Framework Convention on Climate Change This Convention and the subsequent Kyoto Protocol recognize the common but differentiated responsibility of developing and industrialized countries in addressing climate change Developing countries thus have a unique role to play in formulating a sound reasoned and well informed response to the threat of climate change
