The Vetiver System For Soil And Water Conservation:

The Vetiver System For Soil And Water Conservation John C. Greenfield, 2008-06-05 This handbook is based on John Greenfield's earlier book *Vetiver Grass The Hedge Against Erosion*. It updates the text and matches actual photographic examples of Vetiver System applications against the original line drawings. The handbook remains primarily a handbook for lay users interested in basic soil and water conservation practices using the Vetiver System. It is simply written and contains enough information and facts so that even the least technically educated users can confidently read, apply, and achieve good results. We have gone a long way with the Vetiver System since John Greenfield wrote the first handbook in 1987. However, the same basic principles apply and the technology remains low cost, effective, and easy to use. The technology is used in every tropical and subtropical country in the world as well as some countries outside the tropics. *Biological Soil & Water Conservation*. H. Jonas Åkerman, 2025-04-02 This book *Biological Soil Water Conservation* uses the Vetiver grass as an example. It is one example. The book is a simple orientation about using vetiver grass as a straightforward method of applying biological soil and water conservation methods in smallholder farmers' environments. The focus is mainly on African environments from which he collects most of his examples, but there are also examples from Iraqi Kurdistan, Iran, India, Sri Lanka, and Sweden. The material and the level are meant to be suitable as an orientation and introduction for non-specialist students in, for example, Physical and Human Geography, Geology, and Sustainability Studies, and as a general background for various project administrators who need an elementary introduction to biological soil and water conservation methods. *Vetiver Grass System* Paul Nouyen Truong, 1993 ***Vetiver Grass System*** P. N. Truong, 1996 *Vetiver Grass for Soil and Water Conservation, Land Rehabilitation, and Embankment Stabilization* Vetiver Network, 1995 Vetiver grass is the ideal plant for vegetative soil and moisture conservation. Vetiver grass is the hedge against erosion. The role of vetiver grass in sustaining agricultural productivity. *Handbook of Water Harvesting and Conservation* Saeid Eslamian, Faezeh Eslamian, 2021-03-01 Water harvesting is gaining more and more recognition as a sustainable and resilient water supply option. It is economically viable, socially compatible, and environmentally friendly. Water harvesting has proven to be a robust solution to overcome or reduce water shortages all over the world. It is important to understand how to apply this practice in a sustainable and effective way to make full use of its potential in a world increasingly threatened by water scarcity. *The Handbook of Water Harvesting and Conservation: Basic Concepts and Fundamentals* is the most comprehensive up-to-date and applied handbook on water harvesting and conservation yet published. The book's 30 chapters, written by 84 outstanding international experts from approximately 20 selected countries, explore, critique, and develop concepts and systems for water harvesting. The editors bring together many perspectives into a synthesis that is both academically based and practical in its potential applications. *The Handbook of Water Harvesting and Conservation: Basic Concepts and Fundamentals* is an important tool for education, research, and technical works in the areas of soil, water, and watershed management and is highly

useful for drought strategy planning flood management and developing techniques to adapt to climate change in urban agricultural forest and rangeland areas *Halophytes as a resource for livestock and for rehabilitation of degraded lands* V. Squires, A.T. Ayoub, 2012-12-06 Desertification land degradation in arid semi arid and dry sub humid areas resulting mainly from adverse human impacts is the main environmental problem of dry lands which occupy more than 40 per cent of the total global land area The phenomenon threatens about 3.6 billion hectares and currently affects the livelihood of about 900 million people The world is now losing annually about 1.5 million hectares of total irrigated lands 240 million hectares due mostly to salinization mainly in drylands Salt affected soils are widely distributed throughout the arid and semi arid regions and particularly severe in China 7 million ha India 20 million ha Pakistan 3.2 million ha USA 5.2 million ha as well as Near East southern Europe and elsewhere Demands on production have increased the pressure on existing productive land and moved the limits of production onto increasingly marginal lands Wise land use practices have yet to be developed for such conditions The Executive Director of UNEP reported to the Governing Council in February 1992 concerning the Status of Desertification and Implementation of the United Nations Plan of Action to Combat Desertification PACD The Report concludes that major efforts to implement the PACD had gone into supporting measures rather than concrete corrective field operations Little evidence of progress was found in irrigated croplands rainfed croplands or rangelands It was recommended that every piece of land should be used in keeping with its ecological characteristics natural capabilities and constraints

Sustainable Agriculture and Rural Livelihoods (Vol. 1) Dr. Santha Govind, Dr. M. Kavaskar and Dr. D. Vengatesan, Perspectives in Environment S.K. Agarwal, 1998 Conservation and Utilization of Medicinal and Aromatic Plants S.
