Doomsday Clock stimulates solutions for a safer world The Realist Tradition in International Relations Barry Scott Zellen, 2011-08-19

This comprehensive foundation for the study of realism will introduce students in disciplines as varied as philosophy international relations and strategic studies to the majestic breadth of the realist tradition that unifies them all The Realist Tradition in International Relations The Foundations of Western Order introduces the principal theorists who have shaped and defined the realist tradition This once dominant theory of international politics has reemerged to provide a shared foundation for understanding political theory international relations theory and strategic studies The work is comprised of four volumes each focusing upon a distinct period and the pivotal contributors writing in that era Volume 1 State of Hope looks at the classical era when chaos reigned supreme Volume 2 State of Fear goes through the early modern period and the emergence of the modern state Volume 3 State of Awe explores the age of total war with its unprecedented dangers Volume 4 State of Siege examines the present era of insurgency and asymmetrical conflict A truly monumental work this sweeping study will surely foster a new appreciation of the rich tapestry of realist thought and its continuing relevance to the study of world politics

Cult of the Irrelevant Michael C. Desch, 2021-09-28 How professionalization and scholarly rigor made social scientists increasingly irrelevant to US national security policy To mobilize America s intellectual resources to meet the security challenges of the post 9 11 world US Secretary of Defense Robert M Gates observed that we must again embrace eggheads and ideas But the gap between national security policymakers and international relations scholars has become a chasm In Cult of the Irrelevant Michael Desch traces the history of the relationship between the Beltway and the Ivory Tower from World War I to the present day Recounting key Golden Age academic strategists such as Thomas Schelling and Walt Rostow Desch s narrative shows that social science research became most oriented toward practical problem solving during times of war and that scholars returned to less relevant work during peacetime Social science disciplines like political science rewarded work that was methodologically sophisticated over scholarship that engaged with the messy realities of national security policy and academic culture increasingly turned away from the job of solving real world problems In the name of scientific objectivity academics today frequently engage only in basic research that they hope will

somehow trickle down to policymakers Drawing on the lessons of this history as well as a unique survey of current and former national security policymakers Desch offers concrete recommendations for scholars who want to shape government work The result is a rich intellectual history and an essential wake up call to a field that has lost its way *Arms And Judgment* Sheldon M. Cohen, 2019-03-04 This book examines the justifications of the use of armed force and their limits as well as the law of war It is a moral enquiry and adopts an interdisciplinary approach The divergence between legality and morality and its significance is one of the underlying themes of the book **A Global History of the Nuclear Arms Race** Richard Dean Burns, Joseph M. Siracusa, 2013-04-23 Written by two preeminent authors in the field this book provides an accessible global narrative of the nuclear arms race since 1945 that focuses on the roles of key scientists military chiefs and political leaders The first book of its kind to provide a global perspective of the arms race this two volume work connects episodes worldwide involving nuclear weapons in a comprehensive narrative fashion Beginning with a discussion of the scientific research of the 1930s and 1940s and the Hiroshima decision the authors focus on five basic themes political dimensions technological developments military and diplomatic strategies and impact The history of the international nuclear arms race is examined within the context of four historical eras America's nuclear monopoly America's nuclear superiority superpower parity and the post Cold War era Information about the historical development of the independent deterrence of Britain France and China as well as the piecemeal deterrence of newcomers Israel India Pakistan and North Korea is also included as is coverage of the efforts aimed at the international control of nuclear weapons and the diplomatic architecture that underpins the global nuclear non proliferation regime American Airpower Strategy in Korea, 1950-1953 Conrad C. Crane, 2000 The Korean War was the first armed engagement for the newly formed U S Air Force but far from the type of conflict it expected or wanted to fight As the first air war of the nuclear age it posed a major challenge to the service to define and successfully carry out its mission by stretching the constraints of limited war while avoiding the excesses of total war Conrad Crane analyzes both the successes and failures of the air force in Korea offering a balanced treatment of how the air war in Korea actually unfolded He examines the Air Force's contention that it could play a decisive role in a non nuclear regional war but shows that the fledgling service was held to unrealistically high expectations based on airpower's performance in World War II despite being constrained by the limited nature of the Korean conflict Crane exposes the tensions and rivalries between services showing that emphasis on strategic bombing came at the expense of air support for ground troops and he tells how interactions between army and air force generals shaped the air force's mission and strategy He also addresses misunderstandings about plans to use nuclear biological and chemical weapons in the war and includes new information from pilot correspondence about the informal policy of hot pursuit over the Yalu that existed at the end of the war The book considers not only the actual air effort in Korea but also its ramifications The air force doubled in size during the war and used that growth to secure its position in the defense establishment but it wagered its future on its ability

to deliver nuclear weapons in a high intensity conflict a position that left it unprepared to fight the next limited war in Vietnam As America observes the fiftieth anniversary of its initial engagement in Korea Crane s book is an important reminder of the lessons learned there And as airpower continues to be a cornerstone of American defense this examination of its uses in Korea provides new insights about the air force s capabilities and limitations

The Holocaust and Strategic Bombing Eric Markusen, David Kopf, 1995-04-26 Examining the Nazi Holocaust and the U S British strategic bombing of cities during World War II Markusen and Kopf uncover some striking parallels between the two programs of governmental violence Although there were important differences in the two cases the authors show that ultimately democracies and totalitarian governments alike will resort to genocidal killing if it is perceived to be essential to national security The authors suggest that the continuing reliance on nuclear weapons reflects similar psychological and social factors to those that facilitated the Holocaust and strategic bombing during World War II

The Origins of SDI, 1944-1983 Donald R. Baucom, 1992 Most people think Star Wars began with the ideas of Ronald Reagan but its roots reach decades further back In this first scholarly account of the origins of the Strategic Defense Initiative SDI historian Don Baucom traces these roots back to the dawn of the missile age in 1944 He finds SDI emerging after a period of nearly 40 years from forces generated by technological developments changing strategic conditions and the collapse of the SALT arms control negotiations of the 1970s

The Declining Hegemon Joseph Lepgold, 1990-11-21 Joseph Lepgold s book examines the substance of and rationale for the American defense commitment to Europe between 1960 and 1990 a period marked by change in the U S world position and continues into the 1990s in light of the recent changes in Europe Lepgold explores how and why political leaders have adapted to this change His volume is the analysis of a hegemonic state s foreign policy adaption His study probes such questions as If policymakers do not adjust basic policy priorities what other tradeoffs are made Do these constitute meaningful patterns Do commitments resist change or are they context dependent and supple The focus of this provocative study is on U S policy toward Europe rather than NATO and its European members Chapter one of The Declining Hegemon provides the background for Chapters two and three s analytic discussion of policy adaption It examines four policy debates of the late 1970s and 1980s these discuss past adaption as well as future choices These debates question the decline of U S power the future U S role in Europe whether any of the 1950 commitments should be adjusted and the relationship of foreign policy commitments and resources whether they should grow and decline in tandem Chapters four through six provide a decade by decade case study of U S policy The last chapter of Lepgold s timely study draws conclusions and suggests future implications in light of recent developments in Europe

Bernard Brodie and the Foundations of American Nuclear Strategy Barry Howard Steiner, 1991 Steiner analyzes how and why Brodie s understanding of weapons of unparalleled explosive force led him to posit the need for revolutionary strategic thinking in broadminded analytic method and in the focus upon cities as nuclear targets He shows the tremendous effect Brodie s work had on the intellectual climate

in which policy is determined particularly in his frequent combatting of conventional wisdom Studies of War and Peace Øyvind Østerud, 1986 In this timely collection a group of distinguished scholars address some of the most basic questions about war and peace including the causes and empirical correlates of war the pressing problems of nuclear strategy and arms control and various aspects of the international system such as the nature of the postwar superpower relationship patterns of armed conflict in the Third World the problems of crisis management and prospects for reform **Flexibility in Response?** Robert de Wijk, 1989 *Life Under a Cloud* Allan M. Winkler, 1993 Spanning five decades from the Manhattan Project to Chernobyl here is a far reaching look at how the atom shaped American life in the nuclear era Ranging across popular culture scientific thought military strategy and political history Winkler takes a fascinating look at the irony anxiety and official insanity of the atomic age Deindustrialization Gene F. Summers, 1984 *Informing the Blue Helmets* Robert E. Rehbein, Queen's University (Kingston, Ont.). Centre for International Relations, 1996 **Security Studies for the 1990s** Richard H. Shultz, Roy Godson, Ted Greenwood, 1993 The United States is grappling with a new security framework to replace the structure of the Cold War era American policymakers face a host of challenges including regional conflicts ethnic tensions and weapons proliferation that commanded little attention in the past And tomorrow is likely to bring new concerns barely on today's horizon Despite these changes the study of national security remains largely a creature of the Cold War The security studies discipline needs to be overhauled But how should it be revised so that tomorrow's citizens and experts are equipped to understand and help manage new challenges One option is to downgrade security studies and divert educational resources elsewhere Another is to redefine the subject to include the study of an all encompassing list of international problems The third choice is to retain basic definitions concepts and subjects while also making significant adjustments Security Studies for the 1990s addresses all three options This book is the first to reexamine security studies in the post Cold War era Scholars and directors from leading security studies programs representing a cross section of viewpoints on foreign affairs discuss what new material needs to be taught and which courses and concepts should be recast Each chapter provides an indepth review of a major security studies course proposing needed changes and a model syllabus Subjects include intelligence policy global environmental problems the causes and termination of wars and collective security A chapter on the teaching of ethics a subject often neglected in the past is also featured BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Forest Service Symposium**, 1995 **The Nuclear Predicament** Peter R. Beckman, 1992 Updated to reflect how the end of the Cold War gives us an opportunity to redefine the way the nuclear world operates this text shows how nuclear weapons have changed the world militarily politically socially and ethically
