Rarities in phonetics and phonology Natalia Kuznetsova, Cormac Anderson, Shelece Easterday, 2025-05-20 Rare phenomena play a key role in forming and challenging linguistic theory This volume presents multi faceted analyses of rarities in phonetics and phonology from a wide variety of theoretical standpoints Some contributions to the volume analyse language specific rare features placing them in a broader cross linguistic context and looking at a sum of their phonological phonetic and evolutionary properties at times also making connections to sociolinguistic factors Others consider the same or similar phenomena from different analytical angles with extensive cross referencing or take a broad analytical or typological stance towards rare phenomena and discuss what it means to be rare The volume provides a nuanced picture of phonetic and phonological rarities in genealogically diverse

languages mostly lesser studied from around the globe Authors were encouraged to attempt to strike a middle ground between radical exoticisation of the rarities at hand describing them in idiosyncratic terms and radical normalisation underplaying the rarity of the phenomena at hand Highly theory specific or technical terminology is avoided or explained carefully in order to make the book maximally accessible for a wide typologically minded audience

Phonetics and Phonology of Tense and Lax Obstruents in German Michael Jessen, 1999-01-15 Knowing that the so called voiced and voiceless stops in languages like English and German do not always literally differ in voicing several linguists among them Roman Jakobson have proposed that dichotomies such as fortis lenis or tense lax might be more suitable to capture the invariant phonetic core of this distinction Later it became the dominant view that voice onset time or laryngeal features are more reasonable alternatives However based on a number of facts and arguments from current phonetics and phonology this book claims that the Jakobsonian feature tense was rejected prematurely Among the theoretical aspects addressed it is argued that an acoustic definition of distinctive features best captures the functional aspects of speech communication while it is also discussed how the conclusions are relevant for formal accounts such as feature geometry The invariant of tense is proposed to be durational and its basic correlate is proposed to be aspiration duration It is shown that tense and voice differ in their invariant properties and basic correlates but that they share a number of other correlates including F0 onset and closure duration In their stop systems languages constitute a typology between the selection of voice and tense but in their fricative systems languages universally tend towards a syncretism involving voicing and tenseness together Though the proposals made here are intended to have general validity the emphasis is on German As part of this focus an acoustic study and a transillumination study of the realization of p t k f s vs b d g v z in German are presented
