Theorizing In Social Science The Context Of Discovery:

Theorizing in Social Science Richard Swedberg, 2014-04-02 All social scientists learn the celebrated theories and frameworks of their predecessors using them to inform their own research and observations But before there can be theory there must be theorizing Theorizing in Social Science introduces the reader to the next generation of theory construction and suggests useful ways for creating social theory What makes certain types of theories creative and how does one go about theorizing in a creative way The contributors to this landmark collection top social scientists in the fields of sociology economics and management draw on personal experiences and new findings to provide a range of answers to these questions Some turn to cognitive psychology and neuroscience's impact on our understanding of human thought others encourage greater dialogue between and across the arts and sciences while still others focus on the processes by which observation leads to conceptualization Taken together however the chapters collectively and actively encourage a shift in the place of theory in social science today Appealing to students and scientists across disciplines this collection will inspire innovative approaches to producing teaching and learning theory

Advancing Information Systems Theories Nik Rushdi Hassan, Leslie P. Willcocks, 2021-03-21 The information systems IS field represents a multidisciplinary area that links the rapidly changing technology of information or communications and information technology ICT to the business and social environment Despite the potential that the IS field has to develop its own native theories to address current issues involving ICT it has consistently borrowed theories from its reference disciplines often uncritically to legitimize its research This volume is the first of a series intended to advance IS research beyond this form of borrowed legitimization and derivative research towards fresh and original research that naturally comes from its own theories It is inconceivable for a field so relevant to the era of the hyper connected society disruptive technologies big data social media fake news and the weaponization of information to not be brimming with its own theories The first step in reaching the goal of developing native IS theories is to reach an agreement on the need for theory its rationale and its role as the most distinctive product of human intellectual activity This volume addresses what theories are why bother with theories and the process of theorizing itself because the process of developing theories cannot be divorced from the product of that process It will lay out a research agenda for decades to come and will be invaluable reading for any academic in the IS field and related disciplines concerned with information systems technology and their management
