Towards a General Theory of Classifications Daniel Parrochia, Pierre Neuville, 2013-05-14 This book is an essay on the epistemology of classifications Its main purpose is not to provide an exposition of an actual mathematical theory of classifications that is a general theory which would be available to any kind of them hierarchical or non hierarchical ordinary or fuzzy overlapping or non overlapping finite or infinite and so on establishing a basis for all possible divisions of the real world For the moment such a theory remains nothing but a dream Instead the authors essentially put forward a number of key questions Their aim is rather to reveal the state of art of this dynamic field and the philosophy one may eventually adopt to go further To this end they present some advances made in the course of the last century discuss a few tricky problems that remain to be solved and show the avenues open to those who no longer wish to stay on the wrong track Researchers and professionals interested in the epistemology and philosophy of science library science logic and set theory order theory or cluster analysis will find this book a comprehensive original and progressive introduction to the main questions in this field
