Toxic Town IBM Pollution And Industrial Risks:

Toxic Town Peter C. Little, 2014-03-14 Shows the risks of high tech pollution through a study of an IBM plant's effects on a New York town. In 1924 IBM built its first plant in Endicott, New York. Now Endicott is a contested toxic waste site. With its landscape thoroughly contaminated by carcinogens, Endicott is the subject of one of the nation's largest corporate state mitigation efforts. Yet despite the efforts of IBM and the U.S. government, Endicott residents remain skeptical that the mitigation systems employed were designed with their best interests at heart. In *Toxic Town*, Peter C. Little tracks and critically diagnoses the experiences of Endicott residents as they learn to live with high tech pollution, community transformation, scientific expertise, corporate state power, and risk mitigation technologies. By weaving together the insights of anthropology, political ecology, disaster studies, and science and technology studies, the book explores questions of theoretical and practical import for understanding the politics of risk and the ironies of technological disaster response in a time when IBM's stated mission is to build a Smarter Planet. Little critically reflects on IBM's new corporate tagline, arguing for a political ecology of corporate social and environmental responsibility and accountability that places the social and environmental politics of risk mitigation front and center. Ultimately, Little argues that we will need much more than hollow corporate taglines, claims of corporate responsibility, and attempts to mitigate high tech disasters to truly build a smarter planet.

Critical Zones of Technopower and Global Political Ecology Peter C. Little, 2023-09-05 This book explores technology and the global tech industry in relation to social, health, economic, and environmental relations and politics. Peter C. Little argues that the power and influence of electronics and Big Tech, from the proliferation of digital platforms to the expansion of global electronic waste streams, is a political ecological problem that impacts communities and lives in both the Global North and South. From intense resource extraction, industrial pollution, and surging health and economic inequalities to data-driven surveillance, platform economy proliferation, and intrusion, and Silicon Valley corporate power, Little argues that the political ecology of tech matters now more than ever. Based on a mixture of engagements with tech criticism, ethnographic case studies, and critical analysis, and development of guiding concepts ranging from technocapital to technoprecarious political ecology, the book exposes and interrogates the underlying toxicity, precarity, and planetary politics of global tech. *Critical Zones of Technopower and Global Political Ecology* also tracks justice struggles that confront technopower, including just tech forms of social action that further reinforce the importance of a global political ecology of technocapitalism in the digital age.

[Information Resources in Toxicology, Volume 1: Background, Resources, and Tools](#), 2020-05-16 This new fifth edition of *Information Resources in Toxicology* offers a consolidated entry portal for the study, research, and practice of toxicology. Both volumes represent a unique, wide-ranging, curated international annotated bibliography and directory of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. The editors and authors are among the leaders of the profession, sharing their

cumulative wisdom in toxicology's subdisciplines. This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools. Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1, *Background Resources and Tools*, arranged in 5 parts, begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations, constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2, *The Global Arena*, offers contributed chapters focusing on the toxicology contributions of over 40 countries, followed by a glossary of toxicological terms and an appendix of popular quotations related to the field. The book, offered in both print and electronic formats, is carefully structured, indexed, and cross-referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed. Among the many timely topics receiving increased emphasis are disaster preparedness, nanotechnology, omics, risk assessment, societal implications such as ethics, and the precautionary principle, climate change, and children's environmental health. Introductory chapters provide a backdrop to the science of toxicology, its history, the origin and status of toxicoinformatics, and starting points for identifying resources. Offers an extensive array of chapters organized by subject, each highlighting resources such as journals, databases, organizations, and review articles. Includes chapters with an emphasis on format such as government reports, general interest publications, blogs, and audiovisuals. Explores recent internet trends, web-based databases, and software tools in a section on the online environment. Concludes with a miscellany of special topics such as laws and regulations, chemical hazard, communication resources, careers, and professional education. K-12 resources, funding, poison control centers, and patents. Paired with Volume Two, which focuses on global resources, this set offers the most comprehensive compendium of print, digital, and organizational resources in the toxicological sciences, with over 120 chapters, contributions by experts and leaders in the field.

Burning Matters Peter C. Little, 2022. Global trade in electronic waste (e-waste) has led to various waste management challenges, and many regions of the Global South have suffered the toxic consequences. In *Burning Matters*, Peter C. Little explores the complex cultural, economic, and environmental health politics of e-waste work in Ghana. He brings to light the lived experiences of Ghana's e-waste workers as they navigate the health, social, and economic challenges of highly toxic e-waste labor. In particular, Little engages the experiences of e-waste workers who burn bundles of electrical cables to extract copper, a practice that contaminates bodies and the urban environment and which has attracted international organizations seeking to mitigate risk and find quick tech solutions to this highly toxic e-waste work. A nuanced perspective on e-waste burning and environmental politics in Africa at a time when global e-waste generation and trade is at

an all time high Burning Matters contends that e waste interventions devoid of ethnographic perspective and knowledge risk downplaying the vibrant complexities of e waste itself and the matters of social life and labor that matter most to Ghana s e waste workers *Electronic Waste* Josh Lepawsky,2025-02-06 The United Nations has reported that the world is on track to produce over 180 billion pounds of electronic waste e waste by 2030 This tidal wave of discarded electronic products including cellular phones laptop and desktop computers televisions solar panels major household appliances and telecommunications equipment poses a host of serious environmental and public health problems and challenges Electronic Waste A Reference Handbook provides readers with an illuminating survey of the myriad issues and controversies surrounding the collection treatment disposal and recycling of electric and electronic products including trends and challenges related to public health social justice and environmental protection and stewardship It also discusses ways in which increasingly electronics dependent societies and economies are factoring environmental social and public health considerations into their e waste mitigation recycling and disposal strategies The book is further supplemented with perspectives from experts in the field of electronic waste profiles of important organizations and agencies and a chronology of major events and developments **Futures After Progress** Chloe Ahmann,2024-05-14 How do people live in a time after promises of progress have revealed themselves to be empty In Futures after Progress anthropologist Chloe Ahmann examines the grave lethal threat posed by long term air pollution in Baltimore MD Focusing on the industrialized community of Curtis Bay ranked first in the country for air pollutants released from stationary sources she examines competing visions of the future and the severe human toll they can take Examining the rifts between white and Black communities advocates of big industry and environmental activists and older and younger generations Ahmann shows how this community has become a battleground in which lives lost to pollution are seen by some as a regrettable side effect on the road to economic renewal A rigorous moving study of environmental risk and disaster this book offers deep insights for our current condition and the possibility of a postindustrial world **The New York Times Index** ,2008 **Toxics in Your Community Newsletter** ,2000 **Film & Video Finder** ,1997 Government Reports Announcements & Index ,1992-08 **Book of Lists.
