the planet's surface attributed to human activities is now at the forefront of global politics. The agriculture sector not only contributes to climate change but also feels the severity of its effects with the water, carbon, and nitrogen cycles all subject to modification as a result. Crop production systems are each subject to different types of threat and levels of threat intensity. There is, however, significant potential to both adapt to and mitigate climate change within the agricultural sector and reduce these threats. Each solution must be implemented in a sustainable manner and tailored to individual regions and farming systems. This Special Issue evaluates a variety of potential climate change adaptation and mitigation techniques that account for this spatial variation, including modification to cropping systems, Climate Smart Agriculture, and the development and growth of novel crops and crop varieties. [The Impact of Climate Change on Drylands](#) Ton Dietz, R. Ruben, A.

Verhagen, 2004-06-22. People have learned to adapt to risk and uncertainty in fragile dryland environments. *The Role of International Environmental Law in Disaster Risk Reduction* Jacqueline Peel, David Fisher, 2016-09-23. In *The Role of International Environmental Law in Disaster Risk Reduction* edited by Jacqueline Peel and David Fisher, expert authors from four continents offer perspectives on the growing intersection between environmental law and disaster risk management. Chapters discuss the potential for retasking environmental law tools and principles for purposes of mitigating the harms of potential disasters, including those exacerbated by climate change, and approaches for linking institutions and approaches across the environmental, climate adaptation, and disaster risk management fields internationally. This book illustrates the blurring distinction between natural and manmade disasters and the consequences for legal norms and practice in the formerly distinct areas of international environmental law and international disaster law. **Sustainable Food and Agriculture** Clayton Campanhola, Shivaji Pandey, 2018-11-30. *Sustainable Food and Agriculture: An Integrated Approach* is the first book to look at the imminent threats to sustainable food security through a cross-sectoral lens. As the world faces food supply challenges posed by the declining growth rate of agricultural productivity, accelerated deterioration of quantity and quality of natural resources that underpin agricultural production, climate change, and hunger, poverty, and malnutrition, a multi-faceted understanding is key to identifying practical solutions. This book gives stakeholders a common vision, concept, and methods that are based on proven and widely agreed strategies for continuous improvement in sustainability at different scales. While information on policies and technologies that would enhance productivity and sustainability of individual agricultural sectors is available to some extent, literature is practically devoid of information and experiences for countries and communities considering a comprehensive approach. Cross-sectoral policies, strategies, and technologies to SFA. This book is the first effort to fill this gap, providing information on proven options for enhancing productivity, profitability, equity, and environmental sustainability of individual sectors and, in addition, how to identify opportunities and actions for exploiting cross-sectoral synergies. Provides proven options of integrated technologies and policies helping new programs identify appropriate existing programs. Presents mechanisms, tools for balancing trade-offs and proposes indicators to facilitate

Wiebe, Keith D.,Gotor, Elisabetta,2025-07-21 Food

systems have achieved remarkable progress in recent decades but moving forward they will face significant challenges in delivering the many outputs and services we expect and need. This book presents a collection of short chapters on the current state of knowledge about different aspects of the future of food systems written by a diverse group of scientists from around the world with expertise in a wide range of related disciplines and regions. Each chapter examines a particular aspect of food systems, describes recent trends and challenges that highlight the importance of the topic, summarizes the latest available foresight research on that topic and identifies key gaps in existing foresight research that merit further attention. In a world of complexity and uncertainty, the goal of this book and the purpose of foresight analysis more generally is not to predict the future with precision but rather to carefully consider and present what can be known about possible future pathways in order to inform choices today. The collection includes 15 chapters focused on major drivers and impacts of change in food systems, 11 chapters that provide regional and national perspectives on the future of food systems, 7 chapters on the future of major food commodities and 3 chapters on food systems measurement and modeling tools. The contributors come from across CGIAR and many other partner research institutions around the world. This collection was begun as part of the CGIAR Research Initiative on Foresight during the 2022-2024 period and completed as part of the ongoing area of work on foresight and prioritization under the CGIAR Science Program on Policy Innovations.

Harvesting Plant and Microbial Biodiversity for Sustainably Enhanced Food Security Laurent Laplace, Francesca Sparvoli, Khaled Masmoudi, Charles Thomas Hash, 2018-03-19. The World population will reach 9 billion by 2050 with the majority of this growth occurring in developing countries. On the other hand, one in nine of the World's population suffers from chronic hunger, the vast majority of which live in developing countries. We therefore need to find new and sustainable solutions to feed this increasing population and alleviate the predicted negative impact of global changes on crop production. This e-Book deals with new strategies to improve food security and livelihoods in rural communities, reduce vulnerability, increase resilience and mitigate the impact of climate change and land degradation on agriculture. This collection of 18 articles addresses the major abiotic factors limiting crop production worldwide: how to characterize and exploit the available plant biodiversity to increase production and sustainability in agrosystems and the use of beneficial microbes to improve production and reduce the use of fertilizers and pesticides.

Climate Change Challenges and Adaptations at Farm-level Naveen P Singh, Cynthia Bantilan, Kattarkandi Byjesh, Swamikannu Nedumaran, 2015-11-25. This book emphasizes the role of farm-level adaptation as a key in developmental pathways that are challenged by climate risks in the semi-arid tropics of Asia and Africa. It throws light on key issues that arise in farm-level impacts, adaptation and vulnerability to climate change and discusses Q2 methodological approaches undertaken in study domains of Asia and Africa. The book systematically describes the perceptions, aspirations as elicited, voiced by the farmers and identifies determinants of adaptation decisions. Chapters identify constraints and opportunities that are translated into indicative intervention recommendations towards climate resilient farm households in the semi-arid

tropics of Asia and Africa Furthermore it discusses with evidences that contributes to the development of livelihood strategy for poor farmers in Asia Bangladesh India Sri Lanka Thailand Vietnam and China and Africa Burkina Faso Niger Kenya and Ghana

Adaptation to Climate Change and Variability in Rural West Africa Joseph A. Yaro, Jan Hesselberg, 2016-04-12 This book presents conceptual and empirical discussions of adaptation to climate change variability in West Africa Highlighting different countries experiences in adaptation by different socio economic groups and efforts at building their adaptive capacity it offers readers a holistic understanding of adaptation on the basis of contextual and generic sources of adaptive capacity Focusing on adaptation to climate change variability is critical because the developmental challenges West Africa faces are increasingly intertwined with its climate history Today climate change is a major developmental issue for agrarian rural communities with high percentages of the population earning a living directly or indirectly from the natural environment This makes them highly vulnerable to climate driven ecological change in addition to threats in the broader political economic context It is imperative that rural people adapt to climate change but their ability to successfully do so may be limited by competing risks and vulnerabilities As such elucidating those vulnerabilities and sources of strength with regard to the adaptive capacities needed to support successful adaptation and avoid maladaptation is critical for future policy formulation Though the empirical discussion is geographically based on West Africa its applicability in terms of the processes structures needs strategies and recommendations for policy transcends the region and provides useful lessons for understanding adaptation broadly in the developing world

Transformations in West African Agriculture and the Role of Family Farms Camilla Toulmin, Bara Guèye, 2003 This paper examines change in West African agricultural systems the major challenges being faced by smallholders in the region and pathways for the future given international pressure and domestic restraints It aims to strengthen debate on West African agriculture the role of family farms and trade policy at national regional and global levels It identifies and documents how agricultural patterns and livelihoods are evolving in different parts of the region identifies winners and losers outlines the impact of OECD trade and agricultural policy on farming livelihoods and highlights the opportunities for producer organisations to influence policy design and negotiations in partnership with diverse organisations and interests in West Africa

Adapting African Agriculture to Climate Change Walter Leal Filho, Anthony O. Esilaba, Karuturi P.C. Rao, Gummadi Sridhar, 2014-11-26 This book summarizes the evidence from different African countries about the local impacts of climate change and how farmers are coping with current climate risks The different contributors show how agricultural systems in developing countries are affected by climate changes and how communities prepare and adapt to these changes

Climate Change and Multi-Dimensional Sustainability in African Agriculture Rattan Lal, David Kraybill, David O. Hansen, Bal Ram Singh, Theodosy Mosogoya, Lars Olav Eik, 2016-11-23 This 35 chapter book is based on several oral and poster presentations including both invited and contributory chapters The book is thematically based on four pillars of sustainability with focus on sub Saharan Africa SSA Environment Economic Social and

Institutional The environmental sustainability which determines economic and social institutional sustainability refers to the rate of use of natural resources soil water landscape vegetation which can be continued indefinitely without degrading their quality productivity and ecosystem services for different ecoregions of SSA This book will help achieve the Sustainable Development Goals of the U N in SSA Therefore the book is of interest to agriculturalists economists social scientists policy makers extension agents and development bilateral organizations Basic principles explained in the book can be pertinent to all development organizations West African Studies West African Perspectives Resources for Development OECD,Economic Community of West African States,2009-11-03 Presents a cross cutting analysis of the main development challenges for the West African region and offers suggestions on how to meet them
