Wetland Habitats Of North America Ecology And Conservation Concerns:

Wetland Habitats of North America Dr. Darold P. Batzer, Andrew H. Baldwin, 2012-05-22 Wetlands are prominent landscapes throughout North America. The general characteristics of wetlands are controversial; thus, there has not been a systematic assessment of different types of wetlands in different parts of North America or a compendium of the threats to their conservation. *Wetland Habitats of North America* adopts a geographic and habitat approach in which experts familiar with wetlands from across North America provide analyses and syntheses of their particular region of study. Addressing a broad audience of students, scientists, engineers, environmental managers, and policy makers, this book reviews recent scientifically rigorous literature directly relevant to understanding, managing, protecting, and restoring wetland ecosystems of North America.

Remote Sensing of Wetlands Ralph W. Tiner, Megan W. Lang, Victor V. Klemas, 2015-03-23 Effectively Manage Wetland Resources Using the Best Available Remote Sensing Techniques. Utilizing top scientists in the wetland classification and mapping field, *Remote Sensing of Wetlands: Applications and Advances* covers the rapidly changing landscape of wetlands and describes the latest advances in remote sensing that have taken place over the past decade.

Wetland Indicators Ralph W. Tiner, 2016-12-19 Understand the current concept of wetland and methods for identifying, describing, classifying, and delineating wetlands in the United States with *Wetland Indicators*, capturing the current state of science's role in wetland recognition and mapping. Environmental scientists and others involved with wetland regulations can strengthen their knowledge about wetlands and the use of various indicators to support their decisions on difficult wetland determinations. Professor Tiner primarily focuses on plants, soils, and other signs of wetland hydrology in the soil or on the surface of wetlands in his discussion of *Wetland Indicators*. Practicing and aspiring wetland delineators alike will appreciate *Wetland Indicators'* critical insight into the development and significance of hydrophytic vegetation, hydric soils, and other factors. Features color images throughout illustrating wetland indicators. Incorporates analysis and coverage of the latest Army Corps of Engineers delineation manual. Provides over 60 tables including extensive tables of U.S. wetland plant communities and examples for determining hydrophytic vegetation.

Effective Monitoring to Evaluate Ecological Restoration in the Gulf of Mexico National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Ocean Studies Board, Committee on Effective Approaches for Monitoring and Assessing Gulf of Mexico Restoration Activities, 2017-03-16 Gulf Coast communities and natural resources suffered extensive direct and indirect damage as a result of the largest accidental oil spill in U.S. history, referred to as the Deepwater Horizon (DWH) oil spill. Notably, natural resources affected by this major spill include wetlands, coastal beaches, and barrier islands, coastal and marine wildlife, seagrass beds, oyster reefs, commercial fisheries, deep benthos, and coral reefs, among other habitats and species. Losses include an estimated 20% reduction in commercial fishery landings across the Gulf of Mexico and damage to as much as 1,100 linear miles of coastal salt marsh wetlands. This historic spill is being followed by a restoration effort.

unparalleled in complexity and magnitude in U S history Legal settlements in the wake of DWH led to the establishment of a set of programs tasked with administering and supporting DWH related restoration in the Gulf of Mexico In order to ensure that restoration goals are met and money is well spent restoration monitoring and evaluation should be an integral part of those programs However evaluations of past restoration efforts have shown that monitoring is often inadequate or even absent Effective Monitoring to Evaluate Ecological Restoration in the Gulf of Mexico identifies best practices for monitoring and evaluating restoration activities to improve the performance of restoration programs and increase the effectiveness and longevity of restoration projects This report provides general guidance for restoration monitoring assessment and synthesis that can be applied to most ecological restoration supported by these major programs given their similarities in restoration goals It also offers specific guidance for a subset of habitats and taxa to be restored in the Gulf including oyster reefs tidal wetlands and seagrass habitats as well as a variety of birds sea turtles and marine mammals

Wetland Soils Michael J. Vepraskas, Christopher B. Craft, 2016-04-21 Boundaries of a wetland must be identified and located in the field by examining three parameters wetland plants wetland hydrology and hydric soils This book explains how wetland soils are formed described and can be identified in the field The new edition is a major revision of the 2000 book Written by scientists with extensive field and academic experience it contains 11 new chapters updates throughout and augments the previous material on wetland functions and restorations while maintaining the field oriented focus of the first book
