Green Walls in High-Rise Buildings Antony Wood, Payam Bahrami & Daniel Safarik, The Images Publishing Group, 2014-08-29. The Council on Tall Buildings and Urban Habitat has produced four Technical Guides to date since the series launched in late 2012. Each of these guides is the product of a CTBUH Working Group committee formed specifically to address focused topical subjects in the industry. The intention of each guide is the same: to provide working knowledge to the typical building owner or professional who wants a better understanding of available options for improving tall buildings and what affects their design. The object of the series is to provide a tool kit for the creation of better performing tall buildings and to spread the understanding of the considerations that need to be made in designing tall. This technical guide offers an extensive overview of the use of vertical vegetation in high rise buildings, an in-depth analysis of green walls, definitions and typology, including standards, policies and incentives. It features comprehensive case studies along with architectural theories of the public and private benefits of green walls. The book delves into architect design considerations and limitations, the effects of green walls on energy efficiencies and includes recommendations and future research.
