Theoretical Fundamentals Of Atmospheric Optics:

Theoretical Fundamentals of Atmospheric Optics Yu. M. Timofeyev, A. V. Vasil'ev, 2008 The book describes the theoretical fundamentals of atmospheric optics as a science of propagation transformation and generation of electromagnetic radiation in the atmosphere from ultraviolet to microwave radiation The main characteristics of the planets of the solar system and their atmospheres are given The equation of the transfer of radiation in different spectral ranges absorption of radiation by atmospheric gases and aerosol molecular aerosol and other types of nonresonant scattering atmospheric refraction reflection of radiation from the surface and glow of the atmosphere are discussed Methods of calculating radiation for the solar and thermal range of the spectrum are outlined Problems of radiation energetics and remote probing of the atmosphere are discussed 1 Solar system planets and the Sun 2 Earth's atmosphere 3 Propagation of radiation in atmosphere 4 Molecular absorption in atmosphere 5 Scattering of light in atmosphere 6 Optical properties of underlying surfaces 7 Fundamentals of theory of transfer of natural radiation of atmosphere 8 Main concepts of theory of transfer of solar radiation 9 Radiation energetics of the atmosphere underlying surface system 10 Radiation as a source of information on optical and physical parameters of planet atmospheres Theoretical Fundamentals Of Atmospheric Optics Yu. M.

Timofeyev, 2008-01-01 The book deals with theoretical fundamentals of atmospheric optics as a science of propagation transformation and generation in the atmosphere of electromagnetic radiation from the ultraviolet to microwave range of the spectrum The main characteristics of the planets of the solar system and their atmospheres are given Special attention is given to the transfer equations of radiation in different spectrum ranges absorption of radiation by atmospheric gases and aerosol molecular aerosol and other types of non resonant scattering atmospheric refraction reflection of radiation from the surface glow of the atmosphere Problems of radiation energetics and remote probing of the atmosphere are also discussed

Optical Remote Sensing of Ocean Hydrodynamics Victor Raizer, 2019-03-04 Optical Remote Sensing is one of the main technologies used in sea surface monitoring Optical Remote Sensing of Ocean Hydrodynamics investigates and demonstrates capabilities of optical remote sensing technology for enhanced observations and detection of ocean environments It provides extensive knowledge of physical principles and capabilities of optical observations of the oceans at high spatial resolution 1 4m and on the observations of surface wave hydrodynamic processes It also describes the implementation of spectral statistical and fusion algorithms for analyses of multispectral optical databases and establishes physics based criteria for detection of complex wave phenomena and hydrodynamic disturbances including assessment and management of optical databases This book explains the physical principles of high resolution optical imagery of the ocean surface discusses for the first time the capabilities of observing hydrodynamic processes and events and emphasizes the integration of optical measurements and enhanced data analysis It also covers both the assessment and the interpretation of dynamic multispectral optical databases and includes applications for advanced studies and nonacoustic detection This book is an invaluable

resource for researches industry professionals engineers and students working on cross disciplinary problems in ocean hydrodynamics optical remote sensing of the ocean and sea surface remote sensing Readers in the fields of geosciences and remote sensing applied physics oceanography satellite observation technology and optical engineering will learn the theory and practice of optical interactions with the ocean

Hemispherical Photography in Forest Science: Theory, Methods, Applications Richard A. Fournier, Ronald J. Hall, 2017-05-11 This book presents practical information about hemispherical photography from the perspectives of field data acquisition image processing and information retrieval methods This book is organized into three sections The first section describes what is hemispherical photography and what are the fundamental elements of forest structure and light interactions within the forest canopy The second section provides practical information about the equipment procedures and tools for procuring processing and analyzing hemispherical photographs Armed with this information the third section describes several applications of hemispherical photographs to forestry and natural resource assessment The book concludes with a discussion about modelling tools and future directions of this rapidly growing field There is currently no information source on the market that has this comprehensive range of topics combined in a single book The book will appeal to academics graduate students natural resource professionals and researchers alike
