What Fat Re Thinking Obesity Science:

What Is Fat For? Ignatius J Brady MD, 2015-12-14 Obesity science has reached a crossroads The carbohydrate hypothesis is poised to overtake calories in calories out as the predominant understanding of weight gain Physicians dietitians and trainers have come to treat carbs are bad as a new gospel preaching a lifestyle that strays very far from the true scientific consensus In *What Is Fat For* Ignatius Brady a weight loss physician and science writer presents a fresh perspective on obesity based on critical new research that has gone largely overlooked The protein leverage hypothesis holds that neither dietary fat nor dietary carbohydrate cause us to gain weight The issue is re framed and discussed as an imbalance between protein and non protein energy A current imbalance in our food supply has caused a widespread human adaptation the obesity epidemic In a thorough yet readable style the book takes the reader through normal human weight regulation the time frame needed for weight loss and what's missing in the carbs are bad thinking This is not a diet book but a scientific exploration of the inner workings of human biology and our interactions with the modern nutritional environment The question What is fat for drives this narrative which takes nothing for granted analyzes all possibilities and presents detailed evidence for the reader's best judgment Biases are overturned accepted wisdom is re considered and new answers are discovered

Rethinking Obesity Lee F. Monaghan, Emma Rich, Andrea E. Bombak, 2022-05-16 Theoretically informed and empirically grounded *Rethinking Obesity* invites readers to reconsider the medical and public health framing of population weight gain as a massive global problem epidemic or crisis Attentive to social values scientific uncertainty and possible harms the book furthers critique of the weight centred health paradigm and world war on obesity Building upon existing international literature from critical weight studies fat studies and critical obesity research the book advances scholarship with reference to body politics and health policy epidemiology and obesity science media reporting and weight related stigma The authors resist the common moralised narrative that the overweight majority are lazy gluttonous and personally responsible for their actual or potential ills and the solution ultimately necessitates individual lifestyle change Critique is also extended to seemingly compassionate public health interventions that putatively avoid victim blaming through an appeal to the obesogenic environment a consequence of modern living Empirical case studies are grounded in women's repeated and often frustrating experiences of dieting and schoolgirls encounters with fat pedagogy which challenges dominant obesity discourse Recognising that declared public health crises may become layered and cascade through society this book also includes timely research on the COVID 19 pandemic response amidst concerns about lockdown weight gain heightened risk of infection and death among people deemed overweight and obese *Rethinking Obesity* interrogates how social injustice is reproduced not only through cruelty but also through seemingly benevolent representations pedagogies and policies Alternative approaches and action ranging from weight inclusive health paradigms to broader social change are also considered when seeking to foster collective hope in crisis times This is valuable reading
