GetTickCount function

-description

Retrieves the number of milliseconds that have elapsed since the system was started, up to 49.7 days.

-returns

The return value is the number of milliseconds that have elapsed since the system was started.

-remarks

The resolution of the `GetTickCount` function is limited to the resolution of the system timer, which is typically in the range of 10 millisecond.

The elapsed time is stored as a **DWORD** value. Therefore, the time will wrap around to zero if the system is run continuously for 49.7 days.

If you need a higher resolution timer, use a [multimedia timer](#) or a [high-resolution timer](#).

To obtain the time elapsed since the computer was started, retrieve the System Up Time counter in the performance data in the registry key

To obtain the time the system has spent in the working state since it was started, use the [QueryUnbiasedInterruptTime](#) function. **Note** The by approximately 49 days. This helps to identify bugs that might not occur until the system has been running for a long time. The checked by

Examples

```
// calculate a 't' value that will linearly interpolate from 0 to 1 and back every 10 seconds
DWORD currentTime = GetTickCount();
if ( m_startTime == 0 )
