Wind Energy David E. Newton, 2014-11-25 While covering the fascinating history of wind power as a whole this timely handbook focuses on current technological developments and the promise and pitfalls of wind energy as part of the world's energy future The use of wind power for the generation of electricity holds vast potential for solving the world's energy problems but numerous technical and social issues must be addressed before that potential can be realized This handbook will both educate students about current issues related to wind energy and introduce the ways in which mankind has harnessed the wind through the ages The book covers topics as diverse as early windmills in Europe the United States China and the Middle East the development of wind farms for electricity generation and political factors involved in the development of wind energy today Conventional wind turbine mechanics are explained as are the technical improvements that drive modern wind turbines and other wind systems What makes the handbook unique is that it combines hard science with perspective pieces that address topics such as potential environmental damage that can result from modern wind technology and how recent developments in wind turbine technology hold the promise for considerably reducing the cost of this alternate energy source making it competitive with conventional fossil fuels Readers will be engaged by extensive discussion of the economic political and ethical issues raised by the expanding use of wind energy in the United States and elsewhere and they will be intrigued by a look at what wind power can mean to the planet's energy future

diversification of oil supply sources and routes the support of equity oil overseas acquisitions and the build up of strategic oil reserves to the diversification of the energy portfolio In line with the objective to diversify the composition of the energy mix China s leadership is increasingly realizing the need to reduce emissions and support renewable energy development At a recently held Politburo study session President Hu Jintao exclaimed Our task is tough and our time is limited Party organisations and governments at all levels must give priority to emission reduction and bring the idea deep into people s hearts To address the issue of energy security the Chinese government has adapted a two pronged approach While measures to promote energy savings and efficiency curb the increase in energy demand the support of renewable and nuclear energy reduces dependency on energy imports and contributes to the broadening of the
