the history of mathematics is of particular significance because the wider dissemination and diffusion of mathematical knowledge during this time undoubtedly paved the way for the revolutionary developments of mathematics which took place in the seventeenth century Mathematics is indeed a study which requires that its devotee withdraw himself from the world of affairs for reflection and meditation however the great advances in this subject have been made at those times when large numbers of individuals were devoting themselves to the science Such a time was this in which Oughtred lived In England and in France there were many not connected with institutions of learning men like Oughtred like Napier Vieta Fermat and Descartes who devoted themselves to the study of mathematics entirely because of an intellectual interest in the subject Oughtred s devotion to the science was unbounded not only did he instruct many in the difficult poynts of the Art gratis but to certain specially gifted students he gave at the same time both bed and board The three principal works published by Oughtred are the Clavis Mathematicae of 1631 the Trigonometria of 1657 and The Circles of Proportion of 1632 All three works are of real importance in the development of elementary mathematics The first work which like the others is extremely concise treats particularly of the numerical solution of equations the Trigonometria and the Clavis The Key of the Mathematics as it was called in the English translation of 1647 are in advance of many contemporary mathematical works in the generous use of algebraic symbolism The Circles of Proportion discusses the slide rule of which as has been proved by Professor Cajori Oughtred was the inventor Among his minor works several relate to the theory of mathematical instruments designed by Oughtred These works enjoyed a wide popularity *William Oughtred* Florian Cajori,2015-10-17 William Oughtred was a seventeenth century divine who followed mathematics as a pastime He taught mathematics to a select number of pupils one of whom was Christopher Wren he wrote Clavis mathematicae a work studied by Isaac Newton and he invented a number of mathematical instruments among them the slide rule Professor Cajori professor of mathematics in Colorado College has written a sketch of his life with a summary of his published works and other achievements Book Review Digest Volume 12 1917 *Mr. William Oughtred's Key of the Mathematicks* William Oughtred,1694 **Mr. William**
