Journal of Developmental Education, 1993 **Forthcoming Books** Rose Arny, 1988-09 Revitalizing Undergraduate Science Sheila Tobias, 1992 This book explains why so few efforts at reforming science education are successful and why it is that the 300 studies on the subject published over the past decade have done little more than add to a growing body of literature The book describes programs which are successful in terms of faculty accomplishments students graduated and entering advanced study or professional workplace and showing evidence of high morale among both faculty and undergraduates Common elements in many of these programs are abandonment of an almost exclusive emphasis on problem solving and modification of the lecture format to permit teaching of underlying concepts Other variations in traditional introductory physics and chemistry courses are aimed at persuading those simply fulfilling graduation requirements to major in science at bringing minority students into the fold or at combining physics or various sub fields of

chemistry in different ways to promote better understanding Harvard's chem phys is provided as an example of such a combination but also as a case study of how innovation can be stymied by a lack of university wide change The author uses methods of ethnography in reporting what makes individual programs interesting what their faculty are doing and what program participants are thinking PR *Teaching for Quality Learning at University* John Burville Biggs, 1999 Since the first edition of *Teaching for Quality Learning at University* the tertiary sector has changed dramatically Individual teachers as reflective practitioners still need to make their own decisions about how they are going to get students actively involved in large classes to teach international students and to assess in ways that enhance the quality of learning But now that quality assurance and quality enhancement are required at the institutional level the concept of constructive alignment is applied to the reflective institution where it becomes a powerful underpinning to quality enhancement procedures *The Teaching of Elementary Problem Solving in Engineering and Related Fields* James L.
