Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and
necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a
comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative
environmental effects caused by buildings urban designs and settlements Describing the progressive development of green
architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology
materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The
book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in
response to them followed by an historic perspective of the pioneering evolution of green technology and architectural
integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within
a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by
significant world events climate change environmental theories movements in architecture technological innovations and
seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on
one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F
Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end
the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design
land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from
remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where
some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated
approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover
Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and

accumulative content of greening principles in architecture
