Thinking Through Twentieth-Century Architecture Nicholas Ray, 2023-02-08 Shortlisted for the Architectural Book Awards 2024 *Thinking Through Twentieth Century Architecture* connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly

unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students

Introducing Architectural Tectonics Chad Schwartz,2016-10-04 *Introducing Architectural Tectonics* is an exploration of the poetics of construction Tectonic theory is an integrative philosophy examining the relationships formed between design construction and space while creating or experiencing a work of architecture In this text author Chad Schwartz presents an introductory investigation into tectonic theory subdividing it into distinct concepts in order to make it accessible to beginning and advanced students alike The book centers on the tectonic analysis of twenty contemporary works of architecture located in eleven countries including Germany Italy United States Chile Japan Bangladesh Spain and Australia and designed by such notable architects as Tadao Ando Herzog de Meuron Kengo Kuma Olson Kundig and Peter Zumthor Although similarities do exist between the projects their distinctly different characteristics location and climate context size program construction methods and range of interpretations of tectonic expression provide the most significant lessons of the book helping you to understand tectonic theory Written in clear accessible language these investigations examine the poetic creation of architecture showing you lessons and concepts that you can integrate into your own work whether studying in a university classroom or practicing in a professional office

Developing Creative Thinking in Beginning Design Stephen Temple,2018-10-03 Learning to think and act creatively is a requisite fundamental aspect of design education for architectural and interior design as well as industrial and graphic design Development of creative capacities must be encountered early in design education for beginning students to become self actualized as skillful designers With chapters written by beginning design instructors *Developing Creative Thinking in Beginning Design* addresses issues that contribute to deficiencies in teaching creativity in contemporary beginning design programs Where traditional pedagogies displace creative thinking by placing conceptual abstractions above direct experiential engagement the approaches presented in this book set forth alternative pedagogies that mitigate student fears and misconceptions to reveal the potency of authentic encounters for initiating creative transformational development These chapters challenge design pedagogy to address such issues as the spatial body phenomenological thinking making as process direct material engagement and its temporal challenges creative decision making and the wickedness of design and the openness of the

creative design problem In doing so this book sets out to give greater depth to first design experiences and more effectively enable the breadth and depth of the teacher student relationship as a means of helping your students develop the capacity for long term self transformation *The Environmental Imagination* Dean Hawkes,2008 This volume presents a chronologically ordered and detailed account of the developing relationship between technics and poetics in environmental design in architecture through a consideration of the work of major names in the field Health Design Thinking, second edition Bon Ku, Ellen Lupton,2022-02-22 A Fast Company Most Important Books for Designers to Read Right Now Discover how the principles of human centered design can be applied to real world health challenges in dozens of illustrated examples from drug packaging and cancer detection devices to post COVID 19 innovations Written by pioneers in the field Bon Ku a physician leader in innovative health design and Ellen Lupton an award winning graphic designer this book outlines the fundamentals of design thinking and highlights important products prototypes and research in health design This revised and expanded edition describes innovations developed in response to the COVID 19 crisis including an intensive care unit in a shipping container a rolling cart with intubation equipment and a mask brace that gives a surgical mask a tighter seal Graphics by Lupton bring these ideas to life The authors also explore the special overlap of health care and the creative process describing the development of such products and services as a credit card sized device that allows patients to generate their own electrocardiograms a mask designed to be worn with a hijab improved emergency room signage and a map of racial disparities and COVID 19 Health Design Thinking is an essential volume for health care providers educators patients and designers who seek to create better experiences and improved health outcomes for individuals and communities

Raw: Architectural Engagements with Nature Solveig Bøe, Hege Charlotte Faber,2016-04-08 Through cross disciplinary explorations of and engagements with nature as a forming part of architecture this volume sheds light on the concepts of both nature and architecture Nature is examined in a raw intermediary state where it is noticeable as nature despite but at the same time through man s effort at creating form This is done by approaching nature from the perspective of architecture understood not only as concrete buildings but as a fundamental human way both of being in and relating to the world Man finds and forms places where life may take place Consequently architecture may be understood as ranging from the simple mark on the ground and primitive enclosure to the contemporary megalopolis Nature inheres in many aesthetic forms of expression In architecture however nature emerges with a particular power and clarity which makes architecture a raw kind of art Even though other forms of art as well as aesthetic phenomena outside the arts are addressed the analogy to architecture will be evident and important Thus by using the concept of raw as a focal point this book provides new approaches to architecture in a broad sense as well as other aesthetic and artistic practices and will be of interest to readers from different fields of the arts and humanities spanning from philosophy and theology to history of art architecture and music **Architecture Thinking across Boundaries** Rajesh Heynickx, Ricardo Costa Agarez, Elke Couchez,2021-01-14

While most studies on the history of architectural theory have been concerned with what has been said and written this book is concerned with how architecture theory has been created and transmitted Architecture Thinking across Boundaries looks at architectural theory through the lens of intellectual history Eleven original essays explore a variety of themes and contexts each examining how architectural knowledge has been transferred across social spatial and disciplinary boundaries whether through the international circulation of ideas transdisciplinary exchanges or transfers from design practice to theory and back again Dissecting the frictions transformations and resistances that mark these journeys the essays in this book reflect upon the myriad routes that architectural knowledge has taken while developing into architectural theory They critically enquire the interstices geographical temporal and epistemological that lie beyond fixed narratives They show how unstable vital and eminently mobile the processes of thinking about architecture have been

Situate, Manipulate, Fabricate Chad Schwartz, 2020-08-25 This anthology of selected works outlines three critical instigators of architecture all tied directly to the tectonic makeup of our built environment place material and assembly These catalysts provide the organizational framework for a collection of essays discussing their significant influence on the processes of architectural design and construction With content from a diverse collection of notable architects historians and scholars this book serves as a theoretical structure for understanding the tectonic potential of architecture Each chapter is thematically driven consisting of a pair of essays preceded by an introduction highlighting the fundamental issues at hand and comparing and contrasting the points of view presented Situate Manipulate Fabricate offers an opportunity to explore the essential topics that affect the design and construction as well as the experiential qualities of our built environment

Precedented Environmental Futures Colin Porteous, 2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment

Value Management Roger H. Davies, 2016-02-17 Change programmes in both private and public sectors have a poor record of delivering their intended value The reasons given most often for their failure include lack of executive support or buy in from key users loose requirements definition weak programme management and plain wishful thinking They rarely include technical limitations Value Management puts forward the view that the true problem lies in failing to understand the causal links between the intended stakeholder outcomes and the actual programme outputs Repeating the pattern of failure can be avoided by asking two questions Before implementation what capabilities must a change programme deliver when and in what order so as to cause intended value against a defined purpose with speed and certainty During and after implementation what minor adjustments and or major shifts are needed to be certain that the programme remains on purpose and on value and two answers to be given Target time and align change programmes to deliver maximum intended value to stakeholders the baseline business case track and respond to changes during and beyond implementation to ensure that the programme actually delivers or exceeds intended value value realisation The authors show how by asking and answering these questions direction and delivery of any programme can be clarified and greater economic value achieved

The Cambridge Handbook of Visuospatial Thinking Priti Shah, Akira Miyake, 2005-07-25 The ability to navigate across town comprehend an animated display of the functioning of the human heart view complex multivariate data on a company s website or to read an architectural blueprint and form a three dimensional mental picture of a house are all tasks involving visuospatial thinking The field of visuospatial thinking is a relatively diverse interdisciplinary research enterprise An understanding of visuospatial thinking and in particular how people represent and process visual and spatial information is relevant not only to cognitive psychology but also education geography architecture medicine design computer science artificial intelligence semiotics and animal cognition The goal of this book first published in 2005 is to present a broad overview of research on visuospatial thinking that can be used by researchers as well as students interested in this topic in both basic research and applied naturalistic contexts

Acoustic Territories, Second Edition Brandon LaBelle, 2019-10-17 The revised edition of Acoustic Territories Sound Culture and Everyday Life offers an expansive reading of auditory life It provides a careful consideration of the performative dynamics inherent to sounding and listening and discusses how sound studies may illuminate understandings of contemporary society Combining research on urbanism popular culture street life and sonic technologies Acoustic Territories opens up a range of critical perspectives it challenges debates surrounding noise pollution and charts an acoustic politics of space by engaging auditory experience as found within particular cultural histories and related ideologies Brandon LaBelle traces sound culture through a topographic structure from underground territories to the home and further into the rhythms and vibrations of streets and neighborhoods and finally to the sky itself as an arena of transmitted

imaginaries The new edition includes an additional global territory of the relational positioning acoustics as a range of everyday practices that rework dominant tonalities Questions of orientation and emplacement are critically raised reframing listening as multi modal and intrinsic to resistant socialities and what the author terms acts of compositioning The book is fully updated to include new relevant research and references surfacing since 2010 as well as a new preface to the second edition Acoustic Territories continues to uncover the embedded tensions and potentialities inherent to sound as it exists in the everyday spaces around us

A Biophilic Design Guide to Environmentally Sustainable Design Studios Niranjika Wijesooriya, Arianna Brambilla, Lina Markauskaite, 2022-11-06 This book explores the current challenges of teaching biophilic design within environmentally sustainable design ESD education It shows how design frameworks and success matrices can be used within ESD education explores the development of biophilic design frameworks and shows how design thinking can be used to adopt biophilic design within ESD education It introduces the new Process Bridging Technique PBT that can be used to generate sustainable design frameworks able to fulfil the requirements of a performance based approach and at the same time enhance human nature connectedness Based on an educational design research project developed in the past two years at the University of Sydney this book informs new approaches to ESD education and bridges the spheres of research education and profession It serves as a practical guide on how to systematically develop a design framework that can be used in architecture education while presenting the pioneering Process Bridging Technique developed by the authors

Re-thinking the Building Envelope Francesco Sommesse, 2024-09-13 This book illustrates the potential of nature when it comes to rethinking the role of the building envelope which is responsible for energy flows between the internal and external environment in the era of climate change Nature has always inspired architects and engineers in the design of structures and buildings but its role has been limited to a simple morphological imitation with aesthetic value Today however thanks to the biomimetic discipline which imitates the functional processes of nature it is possible to transfer nature s adaptive strategies to architecture and promote the design of buildings and architectural structures that adapt to the surrounding context and respond passively to environmental changes The use of advanced and innovative technologies combined with the use of smart and self responsive materials favours the creation of adaptive and responsive dynamic envelopes capable of adapting their performance to the changing conditions of the environment In this way the envelope is no longer seen as a static element but as dynamic and able to adapt to its context by playing an active role After establishing a general framework for the climate adaptive building envelope and analysing the adaptation strategies of natural organisms this book provides an overview of the biomimetic discipline applied to architecture and building technology The analysis of emblematic and recent case studies together with advanced techniques and materials and the illustration of biomimetic design methods gives this text an added value that promotes the understanding of the different phases necessary to move from nature to architectural technologies This book is an indispensable tool for researchers in the field to understand an

innovative and advanced concept that meets the needs of the time In addition it can also help fa ade manufacturers to understand the current directions of scientific academic research in order to propose new technologies to the market

The Spirit of the School Julian Stern,2011-11-03 Recent interest in personalized learning and the issues raised by Every Child Matters have led to renewed enthusiasm for the more personal and holistic aspects of schooling This fascinating monograph draws on empirical evidence from schools across the world to answer key questions such as What is the spirit of the school How does it differ from school ethos What can teachers and pupils do to contribute to the spirit of the school Drawing heavily on research into learning theories from the social constructivist tradition community from the philosophy of John Macmurray and dialogue from the philosophy of Martin Buber Julian Stern s unique and illuminating book will stimulate fresh thinking about spiritual education
