*New Perspectives and Challenges in Econophysics and Sociophysics* Frédéric Abergel, Bikas K.

Chakrabarti, Anirban Chakraborti, Nivedita Deo, Kiran Sharma, 2019-04-02 This book presents the latest perspectives and challenges within the interrelated fields of econophysics and sociophysics which have emerged from the application of statistical physics to economics and sociology. Economic and financial markets appear to be in a permanent state of flux. Billions of agents interact with each other giving rise to complex dynamics of economic quantities at the micro and macro levels. With the availability of huge data sets, researchers can address questions at a much more granular level than was previously possible. Fundamental questions regarding the aggregation of actions and information and the coordination complexity and evolution of economic and financial networks are currently receiving much attention in the econophysics research agenda. In parallel, the sociophysics literature has focused on large scale social data and their interrelations. In this book, leading researchers from different communities—economists, sociologists, financial analysts, mathematicians, physicists, statisticians, and others—report on their recent work and their analyses of economic and social behavior.

**Challenges in Lattice Quantum Chromodynamics** Andreas Frommer, Thomas Lippert, Bjoern Medeke, Klaus

Schilling,2012-12-06 Lattice gauge theory is a fairly young research area in Theoretical Particle Physics It is of great promise as it offers the framework for an ab initio treatment of the nonperturbative features of strong interactions Ever since its adolescence the simulation of quantum chromodynamics has attracted the interest of numerical analysts and there is growing interdisciplinary engagement between theoretical physicists and applied mathematicians to meet the grand challenges of this approach This volume contains contributions of the interdisciplinary workshop Numerical Challenges in Lattice Quantum Chromodynamics that the Institute of Applied Computer Science IAI at Wuppertal University together with the Von Neumann Institute for Computing NIC organized in August 1999 The purpose of the workshop was to offer a platform for the exchange of key ideas between lattice QCD and numerical analysis communities In this spirit leading experts from both fields have put emphasis to transcend the barriers between the disciplines The meetings was focused on the following numerical bottleneck problems A standard topic from the infancy of lattice QCD is the computation of Green's functions the inverse of the Dirac operator One has to solve huge sparse linear systems in the limit of small quark masses corresponding to high condition numbers of the Dirac matrix Closely related is the determination of flavor singlet observables which came into focus during the last years

**Adaptive Diversification** Michael Doebeli, 2011-08-01 Understanding the mechanisms driving biological diversity remains a central problem in ecology and evolutionary biology Traditional explanations assume that differences in selection pressures lead to different adaptations in geographically separated locations This book takes a different approach and explores adaptive diversification diversification rooted in ecological interactions and frequency dependent selection In any ecosystem birth and death rates of individuals are affected by interactions with other individuals What is an advantageous phenotype therefore depends on the phenotype of other individuals and it may often be best to be ecologically different from the majority phenotype Such rare type advantage is a hallmark of frequency dependent selection and opens the scope for processes of diversification that require ecological contact rather than geographical isolation Michael Doebeli investigates adaptive diversification using the mathematical framework of adaptive dynamics Evolutionary branching is a paradigmatic feature of adaptive dynamics that serves as a basic metaphor for adaptive diversification and Doebeli explores the scope of evolutionary branching in many different ecological scenarios including models of coevolution cooperation and cultural evolution He also uses alternative modeling approaches Stochastic individual based models are particularly useful for studying adaptive speciation in sexual populations and partial differential equation models confirm the pervasiveness of adaptive diversification Showing that frequency dependent interactions are an important driver of biological diversity Adaptive Diversification provides a comprehensive theoretical treatment of adaptive diversification
