Topics in General Topology K. Morita, J.-I. Nagata, 1989-08-04 Being an advanced account of certain aspects of general topology the primary purpose of this volume is to provide the reader with an overview of recent developments The papers cover basic fields such as metrization and extension of maps as well as newly developed fields like categorical topology and topological dynamics Each chapter may be read independently of the others with a few exceptions It is assumed that the reader has some knowledge of set theory algebra analysis and basic general topology

Topics in General Topology Kiiti Morita, Jun-iti Nagata, 1989 Being an advanced account of certain aspects of general topology the primary purpose of this volume is to provide the reader with an overview of recent developments The papers cover basic fields such as metrization and extension of maps as well as newly developed fields like categorical topology and topological dynamics Each chapter may be read independently of the others with a few exceptions It is assumed that the reader has some knowledge of set theory algebra analysis and basic general topology

Modern General Topology J.-I. Nagata, 1985-11-01 This classic work has been fundamentally revised to take account of recent developments in general topology The first three chapters remain unchanged except for numerous minor corrections and additional exercises but chapters IV VII and the new chapter VIII cover the rapid changes that have occurred since 1968 when the first edition appeared The reader will find many new topics in chapters IV VIII e g theory of Wallmann Shanin's compactification realcompact space various generalizations of paracompactness generalized metric spaces Dugundji type extension theory linearly ordered topological space theory of cardinal functions dyadic space etc that were in the author's opinion mostly special or isolated topics some twenty years ago but now settle down into the mainstream of general topology

Point-set Topology With Topics: Basic General Topology For Graduate Studies Robert Andre, 2024-01-19 This textbook can be used as introduction to a general topology course at undergraduate and graduate level courses However many parts of this book present topological concepts that apply directly to functional analysis which will be of interest to scholars working in those fields In Part I readers are eased into the main subject matter of general topology being presented with summaries of normed vector spaces and metric spaces Parts II to VI form the core material contained in most Basic General Topology courses After having worked through the most fundamental concepts of topology the reader will be exposed to brief introductions to more specialized or advanced topics of pointset topology These are presented in Part VII in the form of a sequence of chapters many of which can be read or studied independently or in short sequences of two or three chapters provided that the student has mastered the previous sections Chapters related to the more basic ideas of general topology are followed by a collection of concept review questions the answers to which are found in the main body of the text These questions highlight the main concepts presented in that chapter as well as ideas that are often overlooked when first encountered which will help to test the students understanding The efforts required in answering correctly such questions will provide the student with the ability to solve more complex

problems in the exercises collected at the end of each section Some Topics in General Topology D. Baboolal,1980 *On Some Topics in General Topology* Diane Dehart,1969 **General Topology** N. Bourbaki,1998-08-03 This is the softcover reprint of the English translation of 1971 available from Springer since 1989 of the first 4 chapters of Bourbaki's *Topologie g* n rale It gives all the basics of the subject starting from definitions Important classes of topological spaces are studied uniform structures are introduced and applied to topological groups Real numbers are constructed and their properties established Part II comprising the later chapters Ch 5 10 is also available in English in softcover **Some Topics in General Topology** Baboolal D. (D.Phil.),1980 **General Topology and Its Relations to Modern Analysis and Algebra 2** Z. Frolik,M. Katětov,V. Pták,2014-05-12 General Topology and Its Relations to Modern Analysis and Algebra II is comprised of papers presented at the Second Symposium on General Topology and its Relations to Modern Analysis and Algebra held in Prague in September 1966 The book contains expositions and lectures that discuss various subject matters in the field of General Topology The topics considered include the algebraic structure for a topology the projection spectrum and its limit space some special methods of homeomorphism theory in infinite dimensional topology types of ultrafilters on countable sets the compactness operator in general topology and the algebraic generalization of the topological theorems of Bolzano and Weierstrass This publication will be found useful by all specialists in the field of Topology and mathematicians interested in General Topology *Surveys in General Topology* George M. Reed,2014-05-10 *Surveys in General Topology* presents topics relating to general topology ranging from closed mappings and ultrafilters to covering and separation properties of box products Ordered topological spaces and the use of combinatorial techniques in functional analysis are also considered along with product spaces and weakly compact subsets of Banach spaces Applications of stationary sets in topology are presented as well Comprised of 15 chapters this volume begins with an analysis of some of the techniques and results in the area of closed mappings followed by a discussion on the theory of ultrafilters The reader is then introduced to the question of when a box product of compact spaces is paracompact and how badly a box product of compact or metrizable spaces can fail to be normal Subsequent chapters focus on the transfinite dimension the properties of metacompactness submetacompactness and subparacompactness the dimension of ordered topological spaces the use of combinatorial techniques for the treatment and solution of fundamental problems in functional analysis particularly in the isomorphic theory of Banach spaces and order theoretic base axioms This monograph will be of significant value both to researchers in general topology and to mathematicians outside the field who wish an overview of current topics and techniques
