

Chapter 6- Thermal Energy

I. Temperature and Heat

- A. Temperature—related to the average kinetic energy of an object's atoms or molecules
- B. Thermal energy—the sum of the kinetic and potential energy of all the atoms in an object
 - 1. Thermal energy increases as temperature increases.
 - 2. At constant temperature, thermal energy increases if mass increases.
- C. Thermal energy that flows from something at a higher temperature to something at a lower temperature is called heat.
- D. Specific heat—amount of heat needed to raise the temperature of 1 kg of a material by 1 degree C or K
- E. Changes in thermal energy can be calculated as change in thermal energy equals mass times change in temperature times specific heat.
 - 1. Calculating change in energy
 $Q = mc\Delta T$ $Q = \text{energy (J)}$ $m = \text{mass (Kg)}$ $\Delta T = \text{Change in temperature}$
 - 2. When heat flows into an object and its temperature rises, the change in temperature is positive.
 - 3. When heat flows out of an object and its temperature decreases, the change in temperature is negative.
 - 4. A calorimeter is used to measure specific heat.

II. Transferring Thermal Energy

- A. Conduction—transfer of thermal energy through matter by direct contact of particles
 - 1. Kinetic energy is transferred as particles collide.
 - 2. Solid, particularly metals, are good heat conductors.
- B. The transfer of energy by the motion of heated particles in a fluid is called convection.
 - 1. Convection currents transfer heat from warmer to cooler parts of a fluid.
 - 2. Convection currents create rainforests and deserts over different regions of Earth.
- C. Convection currents take place in liquids and air.
- D. Radiation—energy transfer by electromagnetic waves
 - 1. Some radiation is absorbed and some is reflected when it strikes a material.
 - 2. Heat transfer by radiation is faster in a gas than in a liquid or solid.
- E. Most living things control the flow of heat by using special features such as fur, blubber, or scales.
- F. Insulator—material that does not let heat flow through it easily
 - 1. Gases such as air usually make better insulators than liquids or solids.
 - 2. A vacuum layer in a thermos is a good insulator because it contains almost no matter to allow conduction or convection to occur.

Resources for Teaching Middle School Science Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30 With age appropriate inquiry centered curriculum materials and sound teaching practices middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them Resources for Teaching Middle School Science developed by the National Science Resources Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8 The volume describes more than 400

curriculum titles that are aligned with the National Science Education Standards This completely new guide follows on the success of Resources for Teaching Elementary School Science the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for science teachers The curriculum materials in the new guide are grouped in five chapters by scientific area Physical Science Life Science Environmental Science Earth and Space Science and Multidisciplinary and Applied Science They are also grouped by type core materials supplementary units and science activity books Each annotation of curriculum material includes a recommended grade level a description of the activities involved and of what students can be expected to learn a list of accompanying materials a reading level and ordering information The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide The criteria reflect and incorporate goals and principles of the National Science Education Standards The annotations designate the specific content standards on which these curriculum pieces focus In addition to the curriculum chapters the guide contains six chapters of diverse resources that are directly relevant to middle school science Among these is a chapter on educational software and multimedia programs chapters on books about science and teaching directories and guides to science trade books and periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents
