Evidences from Research in the Life-Span Francesca Baglio, Antonella Marchetti, 2017-02-17 Theory of Mind ToM or mentalization is the ability to understand and foresee the behavior referring to one's own and others mental states Premack Wimmer Perner 1983 This capacity which is considered the most representative mechanism of social cognition is a multifaceted set of competences liable to influence and be influenced by a manifold of psychosocial aspects Studies on typical and atypical clinical development during life showed that ToM is frequently delayed e.g. in deafness or impaired in many clinical conditions e.g. Autism Spectrum Disorder Attention Deficit Hyperactivity Disorder Schizophrenia Borderline Personality Disorder Parkinson's Disease Alzheimer's Disease and on the other hand may not be unequivocally a positive experience It is therefore possible to consider the existence of multiple kinds of Theory of Mind In fact ToM may vary along a quantitative and a qualitative continuum As for the quantitative dimension the continuum is constituted by the fluctuation between high and low levels of ToM ability in different clinical conditions Along this continuum impairment can mean not enough ToM for example in Autism Spectrum Disorder as well as too much ToM for example in Schizophrenia and Borderline Personality Disorder The qualitative dimension highly interrelated with the quantitative one regards the shift between adaptive e.g. prosocial nice ToM vs unadaptive e.g. antisocial nasty ToM mental states content The issue is discussed in light of recent evidence from outstanding researchers working on typical and atypical clinical populations along the life span Findings from the fields of psychology neuropsychology and neuroscience enrich the research topic argumentation
