Time Machines Scientific Explorations In Deep Time:

Time Machines Peter D. Ward, 2012-12-06 In modern times science has brought the past and so many of its creatures back to life via intellectual inquiry application of the scientific method and some extraordinary technology that has recently been developed. The wonder of the process is that such a rich and vivid understanding of the deep past has been generated from such scanty evidence: broken bones, lithified shells, fossil leaves, and even simple layered rocks. The scientists who have contributed to this work have woven rich tapestries of ancient times and their weaving, which is an adventure in itself, is the subject of this book. It is as if true time machines existed, enabling us to retreat through time's mists into the past to examine the then living as though living still, to visit ancient worlds and reconstruct the lives of their denizens. TIME MACHINES The past tantalizes us; it is part of our nature to seek clues about ancient times and our origins. Yet the past is far more than just some moment in time. In our own lives, for instance, it is also place: people and other living things and history. Take the first day of school: the desks and posters, the windows and chalkboards, the people who left us there, the people we met. So too for paleontologists and archeologists is the deep past: a convergence of time, place, inhabitants, and their history or biological interactions.

Gender in Real Time Kath Weston, 2018-10-24 After decades of innovative scholarship that galvanized a field and shattered a world of preconceptions, the study of gender now appears to languish. It has been a long while since the publication of a provocative and influential text like Judith Butler's *Gender Trouble*. Kath Weston argues that the problem is one of time. For too long, gender studies has been preoccupied with the visual, with ample attention given to issues of performativity and embodiment all at the expense of time. *Gender in Real Time* makes a provocative and important new argument that will revolutionize the field of gender studies. Introducing temporality into the equation and examining the ways gender exists, Weston uses the tools of political economy, the history of mathematics, Darwinian evolution, and a bit of physics to propel gender studies toward the future. Startling new concepts like zero gender and the meaning of time claims are introduced. Moreover, the impact of our time-sensitive society with its ever-increasing need for speed and accelerated development is explored for its effect on the production of gender. With chapter titles including *Unsexed*, *The Ghosts of Gender Past*, and *The Global Economy Next Time*, this book offers a pioneering addition to the field that will forever change our notion of gender.

Geo-Logic Robert Frodeman, 2012-02-01 Using a unified vision of geology consisting of equal parts geo-poetry, geo-politics, geo-theology, and geo-science, *Geo-Logic* redraws the boundaries between philosophy and the earth sciences. Although each discipline makes crucial contributions to contemporary environmental concerns, neither will fulfill its potential until it transforms itself by engaging the other. This book offers examples of how to relate environmental philosophy to science, public policy, and real-world problems and shows what is epistemologically distinctive about scientific work and how to respond to the cultural dynamics that are pulling these issues into the public sphere. Frodeman advocates humanizing the earth sciences and bringing philosophy into the field.

Drawing Out Leviathan Keith M. Parsons, 2001-10-01 are

dinosaurs social constructs Do we really know anything about dinosaurs Might not all of our beliefs about dinosaurs merely be figments of the paleontological imagination A few years ago such questions would have seemed preposterous even nonsensical Now they must have a serious answer At stake in the Science Wars that have raged in academe and in the media is nothing less than the standing of science in our culture One side argues that science is a social construct that it does not discover facts about the world but rather constructs artifacts disguised as objective truths This view threatens the authority of science and rejects science's claims to objectivity rationality and disinterested inquiry Drawing Out Leviathan examines this argument in the light of some major debates about dinosaurs the case of the wrong headed dinosaur the dinosaur heresies of the 1970s and the debate over the extinction of dinosaurs Keith Parsons claims that these debates though lively and sometimes rancorous show that evidence and logic not arbitrary rules of the game remained vitally important even when the debates were at their nastiest They show science to be a complex set of activities pervaded by social influences and not easily reducible to any stereotype Parsons acknowledges that there are lessons to be learned by scientists from their would be adversaries and the book concludes with some recommendations for ending the Science Wars

African scale of a valorization of territorial geological heritage **The Multidimensionality of Hermeneutic**

Phenomenology Babette Babich, Dimitri Ginev, 2014-01-15 This book offers new reflections on the life world from both phenomenological and hermeneutic perspectives. It presents a prism for a new philosophy of science and technology especially including the social sciences but also the environment as well as questions of ethics and philosophical aesthetics in addition to exploring the themes of theology and religion. Inspired by the many contributions made by the philosopher Joseph Kockelmans, this book examines the past, present and future prospects of hermeneutic phenomenology. It raises key questions of truth and method as well as highlights both continental and analytic traditions of philosophy. Contributors to *The Multidimensionality of Hermeneutic Phenomenology* include leading scholars in the field as well as new voices representing analytic philosophers of science, hermeneutic and phenomenological philosophers of science, scholars of comparative literature, theorists of environmental studies, specialists in phenomenological ethics and experts in classical hermeneutics.

Sea Dragons Richard Ellis, 2003 In the days when dinosaurs dominated the earth, their marine counterparts every bit as big and ferocious reigned supreme in prehistoric seas. In this book, Richard Ellis takes us back to the Mesozoic era to resurrect the fascinating lives of these giant seagoing reptiles. Fierce predators, he speculates on their habits and tells how they eventually became extinct or did they? He traces the 200 million year history of the great ichthyosaurs, plesiosaurs and mosasaurs who swam the ancient oceans and who may, according to some, still frequent the likes of Loch Ness animal that looked like a crocodile crossed with a shark. The size of a small yacht, with its impossibly long neck, *Plesiosaurus conybeari* has been compared to a giant snake threaded through the body of a turtle. At a length of nearly 60 feet, *Mosasaurus hoffmanni* boasted powerful jaws that could crunch up even the hardest shelled giant sea turtle. And *Kronosaurus queenslandicus*, perhaps the most formidable of the lot, had a skull nine feet long, more than twice that of *Tyrannosaurus rex*, with teeth to match. To reconstruct their lives and habitats, their fossils have been found all over the world in Europe, Australia, Japan and even Kansas in lands that once lay on the floors of Jurassic and Triassic seas. Along the way, the book also provides intriguing insights into and entertaining tales about the work, discoveries and competing theories that compose the world of vertebrate paleontology. The text is also accompanied by Ellis' own illustrations of how these creatures probably appeared and through these likenesses we are invited to speculate on their locomotion, their predatory habits and their lifestyles. Predator-Prey

Interactions in the Fossil Record Patricia H. Kelley, Michal Kowalewski, Thor A. Hansen, 2012-12-06 From the Foreword: Predator-prey interactions are among the most significant of all organism-organism interactions. It will only be by compiling and evaluating data on predator-prey relations as they are recorded in the fossil record that we can hope to tease apart their role in the tangled web of evolutionary interaction over time. This volume, compiled by a group of expert specialists on the evidence of predator-prey interactions in the fossil record, is a pioneering effort to collate the information now accumulating in this important field. It will be a standard reference on which future study of one of the central dynamics of ecology as seen

in the fossil record will be built Richard K Bambach Professor Emeritus Virginia Tech Associate of the Botanical Museum Harvard University **Digressions in Deep Time** Declan Lloyd, Warren Mortimer, 2024-06-18 Deep time is a term which attempts to capture temporal scales far beyond human comprehension These are stretches of time epitomised by geological and cosmic scale processes vast enough to make the entirety of human existence appear as little more than a footnote The past few years have seen a boom in texts dedicated to the study of deep time extending across a broad range of disciplines which fall markedly outside of its geological roots These studies are unified by two ideas in particular that deep time thinking and ecocriticism should be considered in conjunction and that literature and the arts play a vital role in fostering a deep time awareness Digressions in Deep Time is the first collection of essays which considers the multifarious representations of deep time across literature and the arts assembling the work of a wide range of prominent scholars whose research frequently engages with temporality and ecocriticism Featured contributions include work by the Pulitzer prize winning author John McPhee who popularised the term deep time in the late seventies as well as chapters by Richard Irvine author of An Anthropology of Deep Time Benjamin Morgan author of The Outward Mind and Andrew Tate author of Apocalyptic Fiction
