Timing And Time Perception Annals Of The New York Academy Of Sciences:

Time, Action and Cognition Françoise Macar,V. Pouthas,William J. Friedman,2013-04-17 This volume is the outcome of the NATO Advanced Research Workshop on Time Action and Cognition which was held in Saint Malo France in October 1991 The theme time in action and cognition of time was sparked by growing awareness in informal meetings between mostly French speaking time psychologists of the need to bring together time specialists in the areas of development motor behavior attention memory and representations The workshop was designed to be a forum where different theoretical points of view and a variety of empirical approaches could be presented and discussed Time psychologists tended to draw conclusions restricted to their specific fields of interest From our own experience we felt that addressing a common issue possible relationships between time in action and representations of time could lead to a more comprehensive approach We are indebted to NATO for allowing us to bring this idea to fruition We take this opportunity as well to express our thanks to Cognisciences Cognisud section an active interdisciplinary research organization for its financial backing and the CNRS for its scientific support

The Neuropsychology of Attention Ronald A. Cohen,2013-12-11 It has been 15 years since the original publication of *Neuropsychology of Attention* At the time of its publication attention was a construct that had long been of theoretical interest in the field of psychology and was receiving increased research by cognitive scientists Yet attention was typically viewed as a nuisance variable a factor that needed to be accounted for when assessing brain function but of limited importance in its own right There is a need for a new edition of this book within *Neuropsychology* to present an updated and integrated review of what is know about attention the disorders that affect it and approaches to its clinical assessment and treatment Such a book will provide perspectives for experimental neuropsychological study of attention and also provide clinicians with insights on how to approach this neuropsychological domain

Contemporary Learning Theories Stephen B. Klein,Robert R. Mowrer,Robert W. Mowrer,2019-02-21 This unique two volume set provides detailed coverage of contemporary learning theory Uniting leading experts in modern behavioral theory these texts give students a complete view of the field Volume I details the complexities of Pavlovian conditioning and describes the current status of traditional learning theories Volume II discusses several important facets of instrumental conditioning and presents comprehensive coverage of the role of inheritance on learning A strong and complete base of knowledge concerning learning theories these volumes are ideal reference sources for advanced students and professionals in experimental psychology learning and learning theory and comparative physiology

Time, Mind, and Behavior John A. Michon,Janet L. Jackson,2012-12-06 This book is the result of the International Workshop on Time Mind and Behavior which was held at the University of Groningen in September 1984 The aim of the workshop was to produce an up to date review of the state of the art in the field of time psychology The rapid development of a cognitive outlook in experimental psychology has among other things un derlined the need for a reconsideration of time experience the coding and representation of temporal information

and the timing of complex responses Since the publication of Paul Fraisse's classical *Psychologie du Temps* in 1957 time psychology has slowly but steadily drawn an increasing amount of attention to a point where it now seems to be incorporated into the mainstream of research At the same time a noticeable tendency for a renewed general interest in time can also be traced in several other disciplines These two observations supported our belief that it was time for a review of the sort we had in mind At the close of 1983 we completed a project supported by the Dutch Organization for the Advancement of Pure Research in which we had studied the coding and retrieval of temporal information This provided us with a plausible pretense for organizing a workshop Around Christmas time 1983 we were able to mail a preliminary invitation to a number of our colleagues whom we knew to be currently active in the field

Psychology of Learning and Motivation, 1989-03-01

Psychology of Learning and Motivation The Development of Numerical Competence Sarah T. Boysen, E. John Capaldi, 2014-01-14 The area of animal counting has historically been the subject of a long and colorful debate but only more recently have systematic more rigorous experimental efforts to evaluate numerical abilities in animals been undertaken This volume contains chapters from investigators in a range of disciplines with interests in comparative cognition The studies described characterize the emergence of number related abilities in rats pigeons chimpanzees and humans bringing together for the first time in one volume the rich diversity of cognitive capabilities demonstrated throughout many species The data and theoretical perspectives shared will likely serve to provoke much thought and discussion among comparative psychologists and fuel new research and interest in the field of animal cognition

Graphonomics H.S.R. Kao, R. Hoosain, G.P. Van Galen, 1986-09-01 Graphonomics is the newly created term for the science of handwriting and other graphic skills The Second International Conference on the Neural and Motor Aspects of Handwriting attracted contributions from experimental psychologists neuropsychologists neurologists linguists biophysicists and computer scientists from 12 countries This volume the proceedings of the conference features clinical studies of the neural basis of agraphia and dysgraphia from brain damaged patients The motor aspects of handwriting are further extended to new areas of interests Research on handwriting in the English Chinese and Japanese languages forms the first attempt in the field to investigate handwriting from the psycholinguistic perspective of different languages

Time, Internal Clocks and Movement M.A. Pastor, J. Artieda, 1996-06-10 Interest in the concept of time has a long history and has been a topic of study for a wide range of investigators No change can take place without specification of time While philosophers and physicists have been intrigued by the concept of subjective perception of time and its relationship to real time natural scientists have been concerned mainly with investigating time as a factor in understanding the behaviour of animals from the migratory habits of birds to the periodical breeding cycles The immense bulk of temporal perception studies the variety of approaches methods of measurement and even terminology has led to a difficulty in reaching a global interpretation of the results This book aims to give an integrative approach of time sense and to focus the analysis on temporal factors in the processing of movement

trying to link temporal perception studies in the final common pathway that is motion To give some clues of human brain integrative processes at higher levels And finally to clarify the neurophysiological substrate of these operations Stevens'
