The Domestic Dog James Serpell, 2017 Second edition of a classic text on canine science and behavior incorporating two decades of new evidence and discoveries

Current Ornithology D.M. Power, 2013-06-29 In this volume I include chapters on continental population trends ornithology's contribution to the habitat concept social organization outside the breeding season the role of predation in limiting numbers and the evolution of prolonged incubation periods Authors are based in Belgium the United Kingdom and the United States Is there evidence for wholesale population declines in North American birds Robert Askins says yes with qualifications Fragmentation of forest causes the population of many forest interior species to decline and loss of winter forest habitat in Mexico Central America and the Greater Antilles is potentially serious Trends over the past 25 years are however difficult to discern Grassland and shrubland specialists have likewise diminished over the past quarter century Askins calls for management of regional landscapes to maintain habitat diversity As for habitats William Block and Leonard Brennan review the role of ornithology in developing the concept of habitat Their intention is to stimulate ornithologists to consider habitat as a unifying concept in contemporary ecology They describe uses of the habitat concept in basic and experimental ecology Recent advances in sociobiology stimulated deeper interest in social organization Erik Matthysen has gathered a diversity of information on social organization outside the breeding season both in migratory and in nonbreeding resident birds He discusses populations that continue individual associations outside the breeding season and site related aggression territoriality and reviews a number of long term benefits of these behaviors

Early Hominid Activities at Olduvai Richard Potts, 2017-07-28 The earliest sites at Olduvai Gorge in Tanzania are among the best documented and most

important for studies of human evolution This book investigates the behavior of hominids at Olduvai using data of stone tools and animal bones as well as the results of work in taphonomy how animals become fossils the behavior of mammals and a wide range of ecological theory and data By illustrating the ways in which modern and prehistoric evidence is used in making interpretations the author guides the reader through the geological ecological and archeological areas involved in the study of humans Based on his study of the Olduvai excavations animal life and stone tools the author carefully examines conventional views and proposals about the early Olduvai sites First the evidence of site geology tool cut marks and other clues to the formation of the Olduvai sites are explored On this basis the large mammal communities in which early hominids lived are investigated using methods which compare sites produced mainly by hominids with others made by carnivores Questions about hominid hunting scavenging and the importance of eating meat are then scrutinized The leading alternative positions on each issue are discussed providing a basis for understanding some of the most contentious debates in paleo anthropology today The dominant interpretive model for the artifact and bone accumulations at Olduvai and other Plio Pleistocene sites has been that they represent home bases social foci similar to the campsites of hunter gatherers Based on paleo ecological evidence and ecological models the author critically analyzes the home base interpretation and proposes alternative views A new view of the Olduvai sites that they represent stone caches where hominids processed carcasses for food is shown to have important implications for our understanding of hominid social behavior and evolution

The North American Grouse: Their Biology and Behavior Paul Johnsgard, 2016 The ten currently recognized species of grouse in North America have played an important role in America's history from the famous but ill fated heath hen a primary source of meat for the earliest New England immigrants to the ruffed grouse currently one of the most abundant and sought after upland game birds in more than 40 states and provinces This book summarizes the ecology reproductive biology and social behavior of all ten of the extant North American grouse species It also describes the current status of grouse populations some of which are perilously close to extinction The social behavior of grouse is of special biological interest because among these ten species there is a complete mating system spectrum from seasonally monogamous pair bonding to highly promiscuous mating patterns The latter group illustrates the strong structural and behavioral effects of sexual selection resulting from nonmonogamous mating These influences reach a peak in the development by some grouse species of engaging in mating leks arena like competitions performed by males while attempting to attract fertile females and also provide opportunities for females to select optimum mating partners These sexual competitions also promote strong differences evolving in sexual signaling behaviors displays among closely related species Nevertheless a relatively high incidence of mating errors and resulting hybridization often occurs in spite of these marked behavioral differences In addition to a text of 101 000 words the book includes 16 range maps 37 line drawings and 38 photographs by the author as well as nearly 1 400 literature citations

The Human Biome and Human Behaviour Jorge A. Colombo, 2024-08-26 The book represents a critical update on

interactions between the host and its gut microbiome that conditions the socio biology of the mind and behaviour Evidence has been scientifically approached and reveals that our conscious behaviour involves a complex interplay of multiple non conscious domains including complex host gut microbiome relationships The book describes trends and issues on which there is increasing evidence of the impact of host gut microbiome interactions on behaviour and cultural construction of self perception This suggests the need to re evaluate traditional basic concepts of human development Additionally it calls attention to open issues involving conceptual themes on neurobiological integration and its impact on early developmental and social domains on the typical extended period of human postnatal helplessness during which the basic scaffolding of mental development is completed It also deals with the impact of poverty and inadequate early feeding habits on individual cognitive development performance and social construction It discusses the need to reformulate views and policies on social marginalisation child poverty and malnutrition involving host gut microbiome imbalances The spectrum of possible behaviours in all species and its plasticity depends on an integrated vector of basic components involving the genetic code social and physical environmental developmental conditions the relative condition of dominance or submission in social settings or prey predator in the Natural Kingdom and on its physiological and anatomical construction profiles Graduate postgraduate and teachers interested in areas connected with anthropology social medicine early education and health policymakers will benefit greatly from this book

Man the Hunted Donna Hart, 2018-04-17 Man the Hunted argues that primates including the earliest members of the human family have evolved as the prey of any number of predators including wild cats and dogs hyenas snakes crocodiles and even birds The authors studies of predators on monkeys and apes are supplemented here with the observations of naturalists in the field and revealing interpretations of the fossil record Eyewitness accounts of the man the hunted drama being played out even now give vivid evidence of its prehistoric significance This provocative view of human evolution suggests that countless adaptations that have allowed our species to survive from larger brains to speech stem from a considerably more vulnerable position on the food chain than we might like to imagine The myth of early humans as fearless hunters dominating the earth obscures our origins as just one of many species that had to be cautious depend on other group members communicate danger and come to terms with being merely one cog in the complex cycle of life
