Theory And Approach Of Information Retrievals From Electromagnetic Scattering And Remote Sensing:

Theory and Approach of Information Retrievals from Electromagnetic Scattering and Remote Sensing Ya-Qiu Jin, 2006-07-10 Advances in space borne remote sensing have significantly changed the mankind viewpoint how to observe our own Earth planet Great amount of remote sensing data and images presents new resources to quantitatively describe and monitor our Earth environment atmosphere oceanic and land surfaces In remote sensing electromagnetic EM scattering emission and wave propagation as interaction with the Earth environment lay the physical basis for understanding and extracting geoscientific information Study of electromagnetic waves with remote sensing application has become an active and interdisciplinary area This book presents some new progress on the theoretical and numerical approaches for information retrieval of the remote sensing via EM scattering and emission We begin in Chapter 1 with the vector radiative transfer VRT theory for inhomogeneous scatter media The VRT takes account of multiple scattering emission and propagation of random scatter media and quantitatively leads to insights of elucidating and understanding EM wave terrain surface interaction Meanwhile it is extensively applicable to carrying out data interpretation and validation and to solving the inverse problem e g iteratively physically or statistically In Chapter 1 iterative solutions of multiple scattering and emission from inhomogeneous dense scatter media and inhomogeneous non spherical scatter media are discussed Three dimensional VRT equation 3D VRT for spatially inhomogeneous random scatter media for high resolution observation is also investigated The polarimetric imagery of synthetic aperture radar SAR technology is one of most important advances in space borne microwave remote sensing during recent decades *Polarimetric Scattering and SAR Information Retrieval* Ya-Qiu Jin, Feng Xu, 2013-03-29 Taking an innovative look at Synthetic Aperture Radar SAR this practical reference fully covers new developments in SAR and its various methodologies and enables readers to interpret SAR imagery An essential reference on polarimetric Synthetic Aperture Radar SAR this book uses scattering theory and radiative transfer theory as a basis for its treatment of topics It is organized to include theoretical scattering models and SAR data analysis techniques and presents cutting edge research on theoretical modelling of terrain surface The book includes quantitative approaches for remote sensing such as the analysis of the Mueller matrix solution of random media mono static and bistatic SAR image simulation It also covers new parameters for unsupervised surface classification DEM inversion change detection from multi temporal SAR images reconstruction of building objects from multi aspect SAR images and polarimetric pulse echoes from multi layering scatter media Structured to encourage methodical learning earlier chapters cover core material whilst later sections involve more advanced new topics which are important for researchers The final chapter completes the book as a reference by covering SAR interferometry a core topic in the remote sensing community Features theoretical scattering models and SAR data analysis techniques Explains the simulation of SAR images for mono and bi static radars covering both qualitative and quantitative information retrieval Chapter topics include theoretical scattering models SAR data analysis and processing

techniques and theoretical quantitative simulation reconstruction and inversion techniques Structured to enable both academic learning and independent study laying down the foundations first of all before advancing to more complex topics Experienced author team presents mathematical derivations and figures so that they are easy for readers to understand Pitched at graduate level students in electrical engineering physics earth and space sciences as well as researchers MATLAB code available for readers to run their own routines An invaluable reference for research scientists engineers and scientists working on polarimetric SAR hardware and software Application developers of SAR and polarimetric SAR remote sensing specialists working with SAR data using ESA **Advances in Geoscience and Remote Sensing** Gary Jedlovec,2009-10-01

Remote sensing is the acquisition of information of an object or phenomenon by the use of either recording or real time sensing devices that is not in physical or intimate contact with the object such as by way of aircraft spacecraft satellite buoy or ship In practice remote sensing is the stand off collection through the use of a variety of devices for gathering information on a given object or area Human existence is dependent on our ability to understand utilize manage and maintain the environment we live in Geoscience is the science that seeks to achieve these goals This book is a collection of contributions from world class scientists engineers and educators engaged in the fields of geoscience and remote sensing **Moon** Viorel Badescu,2012-03-22 The Earth has limited material and energy resources Further development of the humanity will require going beyond our planet for mining and use of extraterrestrial mineral resources and search of power sources The exploitation of the natural resources of the Moon is a first natural step on this direction Lunar materials may contribute to the betterment of conditions of people on Earth but they also may be used to establish permanent settlements on the Moon This will allow developing new technologies systems and flight operation techniques to continue space exploration In fact a new branch of human civilization could be established permanently on Moon in the next century But meantime an inventory and proper social assessment of Moon's prospective energy and material resources is required This book investigates the possibilities and limitations of various systems supplying manned bases on Moon with energy and other vital resources The book collects together recent proposals and innovative options and solutions It is a useful source of condensed information for specialists involved in current and impending Moon related activities and a good starting point for young researchers
