orthogonal model and orthogonal projectors in the linear regression models Moore Penrose inverse of perturbed operators reverse order law in the case of indefinite inner product space approximation numbers condition numbers idempotent matrices semiring of nonnegative matrices regular matrices over incline and partial order of matrices are the topics addressed under the area of theory of generalized inverses In addition to the above traditional topics and a report on CMTGIM 2012 as an appendix we have an article on old magic squares from India Elements of the Theory of Generalized Inverses of Matrices R.E. Cline, 2012-12-06 The purpose of this monograph is to provide a concise introduction to the theory of generalized inverses of matrices that is accessible to undergraduate mathematics majors Although results from this active area of research have appeared in a number of excellent graduate level text books since 1971 material for use at the undergraduate level remains fragmented The basic ideas are so fundamental however that they can be used to unify various topics that an undergraduate has seen but perhaps not related Material in this monograph was first assembled by the author as lecture notes for the senior seminar in mathematics at the University of Tennessee In this seminar one meeting per week was for a lecture on the subject matter and another meeting was to permit students to present solutions to exercises Two major problems were encountered the first quarter the seminar was given These were that some of the students had had only the required one quarter course in matrix theory and were not sufficiently familiar with eigenvalues eigenvectors and related concepts and that many of the exercises required fortitude At the suggestion of the UMAP Editor the approach in the present monograph is 1 to develop the material in terms of full rank factorizations and to relegate all discussions using eigenvalues and eigenvectors to exercises and 2 to include an appendix of hints for exercises *Methods of Calculating the Inverse of a Matrix* Imogene Catherine Beckemeyer, 1952
