Time Warped Unlocking The Mysteries Of Time Perception:

Time Warped Claudia Hammond, 2012-08-15 We are obsessed with time However hard we might try it is almost impossible to spend even one day without the marker of a clock But how much do we understand about time and is it possible to retrain our brains and improve our relationship with it Drawing on the latest research from the fields of psychology neuroscience and biology and using original research on the way memory shapes our understanding of time acclaimed writer and broadcaster Claudia Hammond delves into the mysteries of time perception Along the way she introduces us to an extraordinary array of colourful characters willing to go to great lengths in the interests of research such as the French speleologist Michel who spends two months in an ice cave in complete darkness *Time Warped* shows us how to manage our time more efficiently speed time up and slow it down at will plan for the future with more accuracy and ultimately use the warping of time to our own advantage

Time Warped Claudia Hammond, 2012 We are obsessed with time However hard we might try it is almost impossible to spend even one day without the marker of a clock But how much do we understand about time and is it possible to retrain our brains and improve our relationship with it It draws on the latest research from the fields of psychology neuroscience and biology and more

The Psychology of Time Perception John Wearden, 2016-06-09 How do people perceive time This book presents a wealth of contemporary and classical research including some of the history and philosophy of time perception Influential internal clock based models of time perception receive an in depth but non technical introduction and discussion The role of cognition and emotion in perceiving time is also explored as well as questions derived from time experience in daily life such as why time seems to pass more quickly in one situation rather than another Classical and modern research on timing in children is reviewed as well as work on time perception and time experience in older people Leading recent models of animal timing are also discussed in a non mathematical way

Understanding the Role of Time-Dimension in the Brain Information Processing Daya Shankar Gupta, Hugo Merchant, 2017-04-13 Optimized interaction of the brain with environment requires the four dimensional representation of space time in the neuronal circuits Information processing is an important part of this interaction which is critically dependent on time dimension Information processing has played an important role in the evolution of mammals and has reached a level of critical importance in the lives of primates particularly the humans The entanglement of time dimension with information processing in the brain is not clearly understood at present Time dimension in physical world the environment of an organism can be represented by the interval of a pendulum swing the cover page depicts temporal unit with the help of a swinging pendulum Temporal units in neural processes are represented by regular activities of pacemaker neurons tonic regular activities of proprioceptors and periodic fluctuations in the excitability of neurons underlying brain oscillations Moreover temporal units may be representationally associated with time bins containing bits of information see the Editorial which may be studied to understand the entanglement of time dimension with neural information processing

The optimized interaction of the brain with environment requires the calibration of neural temporal units. Neural temporal units are calibrated as a result of feedback processes occurring during the interaction of an organism with environment. Understanding the role of time dimension in the brain information processing requires a multidisciplinary approach which would include psychophysics, single cell studies and brain recordings. Although this Special Issue has helped us move forward on some fronts including theoretical understanding of calibration of time information in neural circuits and the role of brain oscillations in timing functions and integration of asynchronous sensory information, further advancements are needed by developing correct computational tools to resolve the relationship between dynamic hierarchical neural oscillatory structures that form during the brain's interaction with environment.

The Psychology of Time Richard Gross, 2024-03-07. What is the meaning of time? Do we have an internal clock? Can time speed up or slow down? The Psychology of Time considers how we define, describe and experience time. From a discussion of how our language around time is dependent on metaphor to the role of biology in controlling our bodily experience of time, the book delves into how the finitude of life is a given human experience. It looks at how we reflect on the passage of time throughout our lives and how our experience of time can be influenced by diverse factors including our age, gender, health and culture. Offering insights into something we are all immersed in but often give little thought to, The Psychology of Time shows us how our understanding and experience of time can influence our everyday behaviour.

The Restless Compendium Felicity Callard, Kimberley Staines, James Wilkes, 2016-09-27. This book is open access under a CC BY license. This interdisciplinary book contains 22 essays and interventions on rest and restlessness, silence and noise, relaxation and work. It draws together approaches from artists, literary scholars, psychologists, activists, historians, geographers and sociologists who challenge assumptions about how rest operates across mind, bodies and practices. Rest's presence or absence affects everyone. Nevertheless, defining rest is problematic; both its meaning and what it feels like are affected by many socio-political, economic and cultural factors. The authors open up unexplored corners and experimental pathways into this complex topic with contributions ranging from investigations of daydreaming and mindwandering through histories of therapeutic relaxation and laziness to creative critical pieces on lullabies and the Sabbath to experimental methods to measure aircraft noise and track somatic vigilance in urban space. The essays are grouped by scale of enquiry into mind, body and practice, allowing readers to draw new connections across apparently distinct phenomena. The book will be of interest to students and scholars across a range of disciplines in the social sciences, life sciences, arts and humanities.

Transcendence Gaia Vince, 2020-01-21. In the tradition of Guns, Germs and Steel and Sapiens, a winner of the Royal Society Prize for Science Books, shows how four tools enabled us humans to control the destiny of our species. A wondrous, visionary work. Tim Flannery, scientist and author of the bestselling The Weather Makers, asks: What enabled us to go from simple stone tools to smartphones? How did bands of hunter-gatherers evolve into multinational empires? Readers of Sapiens will say: a cognitive revolution, a dramatic evolutionary

change that altered our brains turning primitive humans into modern ones caused a cultural explosion In Transcendence Gaia Vince argues instead that modern humans are the product of a nuanced coevolution of our genes environment and culture that goes back into deep time She explains how through four key elements fire language beauty and time our species diverged from the evolutionary path of all other animals unleashing a compounding process that launched us into the Space Age and beyond Provocative and poetic Transcendence shows how a primate took dominion over nature and turned itself into something marvelous

Neural Suitcase Tells the Tales of Many Minds Purnendu Ghosh,2014-07-11 The book is about the mind The most interesting interdisciplinary conversations and the best idea sessions are held inside our mind The mind is our neural suitcase Our neural suitcase tells the tales of so many minds The tales are beautiful moral vulnerable quiet chaotic hungry obese real fictional memorable forgetful creative curious humorous trustworthy biased wise foolish friendly hateful meaningful blind and questioning The mind also builds castles in the air It is for us to put foundations under these castles It is for us to pack our neural suitcase carefully Our questioning mind asks many interesting questions such as Should we design a perfect mind Why does time have no mind of its own Why is it hard to walk straight Why do we make deliberate mistakes Why is boredom not for everyone What is the right dose of grief Why is poison not always poisonous Should we always hate our enemy Why are memoirs fabricated Why we are not totally dishonest Why are all worries not worth worrying Why shall some questions remain unresolved forever The book is about the mind of a teacher a mother a beautiful woman a gossipier a liar a fool a corrupt person a winner etc
