Mobile Marketing Management Hongbing

Hua, 2019-03-18 With the development of mobile internet technology people's lifestyle and consumer behavior are changing rapidly. Nowadays the products on the market are updating more and more frequently and the traditional marketing theory and brand theory fail to get with the mobile internet. So what's the innovative marketing to take in the new era? Since 2012 China has entered into the mobile era and became a major country of mobile internet application. The book summarizes the experience of the author accumulated from many trials and errors in management and marketing innovation so as to form the pattern of management and marketing for the next 30 years. Mobile Marketing Management lays the foundation for the new era with four pillars: service, substance, superuser, space, known as 4S theory for short. In view of the concept of customer first, it is all about service and products become productized service concepts. In view of the failure of mass communication, the competition among all services becomes the competition of substance differentiation. Regarding the popularity of self-organization, it becomes a trend to cooperate with people rather than the company to develop the market. In view of the principle of fuzzy market boundary, the enterprises shall optimize their living space and evolve their development space. This book contains numerous case studies along with analysis and creates the discipline of mobile marketing management, providing innovative theories, methods, and tools for the marketing of enterprises. Through this book, readers can master the marketing methods of the mobile internet era. They can apply the marketing theory in this book to guide the marketing practice, thus improving marketing efficiency and reducing marketing costs.

California. Court of Appeal (1st Appellate District). Records and Briefs California (State)., **Societal Impacts of Artificial Intelligence and Machine**

Learning Carlo Lipizzi, 2024-03-13 This book goes beyond the current hype of expectations generated by the news on artificial intelligence and machine learning by analyzing realistic expectations for society, its limitations, and possible future scenarios for the use of this technology in our current society. Artificial Intelligence is one of the top topics today and is inflating expectations beyond what the technology can do in the foreseeable future. The future cannot be predicted, but the future of some elements of our society, such as technology, can be estimated. This book merges the modeling of human reasoning with the power of AI technology, allowing readers to make more informed decisions about their personal or financial decisions or just being more educated on current technologies. This book presents a model that sketches potential future scenarios based on a discussion of the expectations today, the analysis of the current gap in the literature, and a view of possible futures in terms of technology and use cases. Specifically, this book merges literature on the technology aspects, the sociological impacts, and philosophical aspects.
