Opportunism in supplier-buyer relationships Sebastian Schulte, 2007-01-11 Inhaltsangabe Abstract In 1996 managers of U S based automaker Ford Corporation realized that they had been fooled The decision to allocate the company's seat construction to the single supplier Lear Corporation had turned out to be a disaster Lear had made unrealistic promises concerning their engineering talent in order to get into business with the major carmaker As Ford was locked in with a supplier that was unable to keep deadlines and that produced parts that did not work the production and on time launch of the 1996 version of Ford Taurus were severely put at risk In this industry example the supplier behaved opportunistically towards the buyer by misrepresenting the true skills of its employees According to Transaction Cost Economics TCE opportunism is considered as an endogenous factor it forms an inherent part of business relationships Following Williamson's explanation opportunism is one of the rudimentary attributes of human nature Whenever individuals will be given the chance to act opportunistically they will do so However taking a look at current literature the classical view of opportunism as a ubiquitous phenomenon becomes unsustainable The emergence and degree of opportunistic behaviour is influenced by a variety of antecedent factors such as institutional environment e g competition technology or social determinants of behaviour e g commitment trust Psychological research on this topic has shown that TCE lacks an explicit distinction between opportunism as an attitude and as a type of behaviour or action Whether an agent behaves opportunistically or not does not only depend on his inclination towards carrying out unfair business practices but also on the incentives that are given to him Furthermore recent approaches drawing on Agency Theory have replaced the traditional model of a self-serving man by an agent showing cooperative behaviours as described in Stewardship Theory In his original version of TCE Williamson relied on vertical integration as an effective governance mechanism to attenuate opportunism and to safeguard specific investments Transactions with high asset specificity should be governed by hierarchy mechanisms that are not accessible to markets such as intensive monitoring or incentive structures As a result transaction costs would be minimized In fact hierarchical controls should not be treated as a universal remedy to curtail unfair business practices
