Treatment Yossi Levi-Belz, Yari Gvion, Alan Apter, 2019-07-11 Suicide is a highly complex and multifaceted phenomenon with many contributing and facilitating factors and variables. However, given its being one of the most severe human behaviors, an obvious focus would be to identify the underlying psychological mechanisms and processes that may lead to suicidal ideation and behavior. This eBook is dedicated to studies exploring various approaches to the psychology of suicidal behavior as well as of non-suicidal self-injury (NSSI). The purpose of this eBook is to shed light on in-depth examinations of the current knowledge and empirical data regarding models, theories, and specific dimensions and variables that may help us increase the psychological understanding of suicidal phenomena. The specific goal is to identify particular psychological characteristics that may be used to develop prevention and intervention methods and programs. We believe that this eBook can contribute to the understanding of this behavior and help to develop specific tools, therapeutic guidelines, and programs that may help reduce the number of suicides occurring annually. This eBook is dedicated to our dearest friend Dafni Assaf, who was one of the greatest leaders of the suicide prevention program in Israel.

Understanding Suicide and Its Prevention

Federico Sanchez, 2010-06 Finally a book that explains suicide using the latest research in suicidology. A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens. The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular. This is an important book for all professionals who deal with mental disorders in general and suicide in particular. It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering from mental disorders. The author begins with a brief summary of the statistics of the who's, the how's, and the where's of suicide. This gives us a clear idea of the magnitude of the problem of suicide, of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole. Then, as an important first step to understanding the medical community's standard approaches to mental disease, he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders. He presents the most accepted current theories and models of suicide. He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation. And he explains how suicide risk assessment is currently done along with other important considerations. He proceeds to explain in everyday language, where possible, his theory of how the brain works, beginning with a simple explanation of how neurons communicate with each other. Later he explains how the brain controls the body and how we see with the back of our heads, how memory systems become a logical extension or expansion of our sensory and motor systems. Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking, reasoning, and constructing our past, our lives, and our identities. But all this would mean nothing without the introduction of emotions and how the brain constructs contexts. He explains how emotions are an

integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These lead to a learned discussion of how these various systems can go haywire causing mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnesic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors

Giannetti, 2013-11-22 The last two decades have seen unprecedented increases in health care costs and at the same time encouraging progress in psychotherapy research On the one hand accountability cost effectiveness and efficiency have now become commonplace terms for providers of mental health services whereas on the other hand an increasingly voluminous literature has emerged supporting the effectiveness of a number of types of psychotherapies There now exists the possibility for the design and delivery of mental health services that drawing upon this literature more closely approximate empirically established data concerning the appropriateness and effectiveness of psychotherapy The Handbook of the Brief Psychotherapies is intended to capture one major thrust of this movement the development of a group of empirically grounded time limited therapies all sharing a common interest in the clinical utilization of a structured focus and an emphasis on time and action For many years professional self interest competing theoretical paradigms and the vagaries of practice wisdom and clinical myth have influenced the practice of psychotherapy A critical questioning of the resulting predominantly nondirective open ended and global therapies has led to a growing emphasis on action oriented problem focused time limited therapies Yet ironically this interest in the brief psychotherapies has not so much involved a radical departure from traditional therapeutic modalities as it has emphasized a new pragmatism about how time action and structure operate in life as well as in therapy
