Water Management in 2020 and Beyond

Asit K. Biswas, Cecilia Tortajada & Rafael Izquierdo (Eds)

Berlin, Springer, 2009

A forward-looking book on water is the need of the hour for more than one reason. First and foremost, generation after generation grew up with little thought about considering water as a scarce resource—any scarcity being a temporary phenomenon and punishment meted out by Mother Nature. Second, historically, planning for economic and social development, while taking explicit notice of the growing demand for water for agriculture, industry, energy, services and households, did not really project the centrality of water to development. Third, one never wastes medicine or food; but most people do not routinely think of conserving water. Finally, increasing amounts of wastewater and the problems associated with its disposal pose a formidable challenge to professionals and policy makers in the water sector.

Therefore, it is laudable that the International Centre of Water and Environment of the Government of Aragon, in association with a number of other agencies,¹ has taken the initiative to bring together, in late 2006, experts on water issues, population, development, economics, agriculture, energy, health and technology, for a workshop on the theme of *Water Management Beyond 2020*. The 13 papers deliberated at the workshop are presented in the volume under review.

The first substantive paper entitled ‘Changing Global Water Management Landscape’ by Biswas & Tortajada provides the framework for the rest of the book. At the cost of oversimplification, it could be said that the central theme of the chapter was woven around the important and critical, and recent and current global developments. Industrial water use has been growing, growing energy consumption places rising demands on water, accelerating urbanization places extra demands on water, demographic changes such as ageing have implications for water delivery, and technological changes have impact on water use in agriculture, which accounts for a dominant 70% share. Water planning and management have become increasingly complex and will be more so in coming decades; yet, the challenges come from non-water sectors, where water professionals may not be able to influence policy and programmes. Overall policy directions must depend, therefore, on an explicit understanding of the linkages between water and food, water and energy and water and environment. The clarion call is for planning for uncertainties and unexpected developments.

Effects of urbanization and ageing on water resources over the coming four decades are the theme of the paper by Olli Varis. Credit goes to the author for emphasizing,
