Uncharted Big Data As A Lens On Human Culture:

Uncharted Erez Aiden, Jean-Baptiste Michel, 2013-12-26 One of the most exciting developments from the world of ideas in decades presented with panache by two frighteningly brilliant endearingly unpretentious and endlessly creative young scientists Steven Pinker author of *The Better Angels of Our Nature* Our society has gone from writing snippets of information by hand to generating a vast flood of 1s and 0s that record almost every aspect of our lives who we know what we do where we go what we buy and who we love This year the world will generate 5 zettabytes of data That s a five with twenty one zeros after it Big data is revolutionizing the sciences transforming the humanities and renegotiating the boundary between industry and the ivory tower What is emerging is a new way of understanding our world our past and possibly our future In *Uncharted* Erez Aiden and Jean Baptiste Michel tell the story of how they tapped into this sea of information to create a new kind of telescope a tool that instead of uncovering the motions of distant stars charts trends in human history across the centuries By teaming up with Google they were able to analyze the text of millions of books The result was a new field of research and a scientific tool the Google Ngram Viewer so groundbreaking that its public release made the front page of *The New York Times* *The Wall Street Journal* and *The Boston Globe* and so addictive that Mother Jones called it the greatest timewaster in the history of the internet Using this scope Aiden and Michel and millions of users worldwide are beginning to see answers to a dizzying array of once intractable questions How quickly does technology spread Do we talk less about God today When did people start having sex instead of making love At what age do the most famous people become famous How fast does grammar change Which writers had their works most effectively censored by the Nazis When did the spelling donut start replacing the venerable doughnut Can we predict the future of human history Who is better known Bill Clinton or the rutabaga All over the world new scopes are popping up using big data to quantify the human experience at the grandest scales possible Yet dangers lurk in this ocean of 1s and 0s threats to privacy and the specter of ubiquitous government surveillance Aiden and Michel take readers on a voyage through these uncharted waters

Technologies of Vision Steve F Anderson,2017-10-20 An investigation of the computational turn in visual culture centered on the entangled politics and pleasures of data and images If the twentieth century was tyrannized by images then the twenty first is ruled by data In *Technologies of Vision* Steve Anderson argues that visual culture and the methods developed to study it have much to teach us about today s digital culture but first we must examine the historically entangled relationship between data and images Anderson starts from the supposition that there is no great divide separating pre and post digital culture Rather than creating an insular field of new and inaccessible discourse he argues it is more productive to imagine that studying the

digital is coextensive with critical models especially the politics of seeing and knowing developed for understanding the visual Anderson's investigation takes on an eclectic array of examples ranging from virtual reality culture analytics and software art to technologies for computer vision face recognition and photogrammetry Mixing media archaeology with software studies Anderson mines the history of technology for insight into both the politics of data and the pleasures of algorithms He proposes a taxonomy of modes that describe the functional relationship between data and images in the domains of space surveillance and data visualization At stake in all three are tensions between the totalizing logic of data and the unruly chaos of images

Digital (In)justice in the Smart City Debra Mackinnon, Ryan Burns, Victoria Fast, 2022-12-21 In the contemporary moment smart cities have become the dominant paradigm for urban planning and administration which involves weaving the urban fabric with digital technologies Recently however the promises of smart cities have been gradually supplanted by recognition of their inherent inequalities and scholars are increasingly working to envision alternative smart cities Informed by these pressing challenges *Digital In Justice in the Smart City* foregrounds discussions of how we should think of and work towards urban digital justice in the smart city It provides a deep exploration of the sources of injustice that percolate throughout a range of sociotechnical assemblages and it questions whether working towards more just sustainable liveable and egalitarian cities requires that we look beyond the limitations of smartness altogether The book grapples with how geographies impact smart city visions and roll outs on the one hand and how unjust geographies are produced in smart pursuits on the other Ultimately *Digital In Justice in the Smart City* envisions alternative cities smart or merely digital and outlines the sorts of roles that the commons utopia and the law might take on in our conceptions and realizations of better cities

A History of Military Morals Brian Smith, 2022-04-25 The history of noncombatant immunity is well established What is less understood is how militaries have rationalized violating this immunity This book traces the development of how militaries have rationalized the killing of the innocent from the thirteenth century onward In the process this historiography shows how we have arrived at the ascendant convention that assumes militaries should not intentionally kill the innocent Furthermore it shows how moral arguments about the permissibility of killing the innocent are largely adaptations to material changes in how wars are fought whether through

technological innovations or changes in institutional structures The Politics of Knowledge Richard K. Laird, 2019-05-03
Whether or not the U S is in decline can be debated but there is evidence that its political system is becoming less able to solve major problems This is in part because loyalty to a belief or an ideology may be taking priority over learning how to understand the problems This work attempts to revitalize the importance of learnability by reviewing some fundamentals of who we are how the system works and why learning is difficult Humans driven by opinions and perceptions tend to discount politics similar to the way they might discount science yet it was the study of science and politics that brought much of mankind to remarkably higher standards of living Government and the economic system it implemented was initially designed for the purpose of channeling self interests into public benefits Understanding what an inclusive political culture is or why there is a Constitution for example could be useful toward restoring the credibility of our central political organization the core of society's stability and development We are losing respect for our government's decision making ability but in a democracy citizens must be held more accountable for who their government is The hypothesis is that if more humans are more learnable we will increase the possibilities for finding the best solutions to big problems **Information Design**
