The Routledge Handbook of Paleopathology Anne L. Grauer, 2022-12-30 The Routledge Handbook of Paleopathology provides readers with an overview of the study of ancient disease The volume begins by exploring current methods and techniques employed by paleopathologists as means to highlight the range of data that can be generated the types of questions that can be methodologically addressed our current limitations and goals for the future Building on these foundations the volume introduces a range of diseases and conditions that have been noted in the fossil archaeological and historical record offering readers a foundational understanding of pathological conditions along with their potential etiologies Importantly an evolutionary and highly contextualized assessment of diseases and conditions will be presented in order to demonstrate the need for adopting anthropological biological and clinical approaches when exploring the past and interpreting the modern world The volume concludes with the contextualization of paleopathological research Chapters highlight ways in which analyses of health and disease in skeletal and mummified remains reflect political and social constructs of the past and present Health and disease are tackled within evolutionary perspectives across deep time and generationally and the nuanced interplay between disease and behavior is explored The volume will be indispensable for archaeologists bioarchaeologists and historians and those in medical fields as it reflects current scholarship within paleopathology and the field s impact on our understanding of health and disease in the past the present and implications for our future

Hungry Hollow A.K. Dewdney, 2012-12-06 Hungry Hollow is simply an ordinary creek winding through about a mile of ordinary forest and meadow somewhere east of the Rocky Mountains But like all such places it is also a vast and intricate web of life with extensions that reach around the planet back into prehistoric time and within to a teeming bizarre microscopic world In dozens of short wonderfully imaginative chapters A K Dewdney introduces us to the denizens of this world We encounter a hackberry tree whose branches perfectly reproduce the taxonomic Tree of Life learn how it would look and feel to shrink by stages to the size of an amoeba while swimming in a river watch a toad win the lottery and see the world of Hungry Hollow from the viewpoint of bears earthworms and even stones This is an excursion into natural history like no other

Water Lore Camille Roulière, Claudia Egerer, 2022-05-19 Located within the field of environmental humanities this volume engages with one of the most pressing contemporary environmental challenges of our time how can we shift our understanding and realign what water means to us Water is increasingly at the centre of scientific and public debates about climate change In

these debates rising sea levels compete against desertification hurricanes and floods follow periods of prolonged drought As we continue to pollute canalise and desalinate waters the ambiguous nature of our relationship with these entities becomes visible From the paradisiac and pristine scenery of holiday postcards through to the devastated landscapes of post tsunami news reports images of waters surround us And while we continue to damage what most sustains us collective precarity grows Breaking down disciplinary boundaries with contributions from scholars in the visual arts history earth systems anthropology architecture literature and creative writing archaeology and music this edited collection creates space for less prominent perspectives with many authors coming from female Indigenous and LGBTQIA contexts Combining established and emerging voices and practice led research and critical scholarship the book explores water across its scientific symbolic material imaginary practical and aesthetic dimensions It examines and interrogates our cultural construction and representation of water and through original research and theory suggests ways in which we can reframe the dialogue to create a better relationship with water sources in diverse contexts and geographies This expansive book brings together key emerging scholarship on water persona and agency and would be an ideal supplementary text for discussions on the blue humanities climate change environmental anthropology and environmental history **Structures of Life** Basil

The Image of Restoration Science Michael Hunter, 2016-12-01 This book is about a single image the frontispiece to Thomas Sprat s *History of the Royal Society of London* 1667 Designed by John Evelyn and etched by Wenceslaus Hollar it is arguably the best known representation of seventeenth century English science The use of such plates to celebrate and legitimise the new science of the period falls into a tradition that was well established both in Britain and in Europe more generally and which has increasingly attract attention from historians Nevertheless there are many questions to be asked about it and how it came into being Was it an original composition by Evelyn or is it based on earlier exemplars Can all the scientific instruments books and other objects that appear in it be identified and what significance should be attached to their inclusion Above all how did the plate come to be designed in the first place and what is its true relationship with Sprat s book In order to assess such issues this study provides a full analysis of Evelyn s image in its Royal Society setting and the wider world of early modern science The book first considers the overall iconography of the image and its message concerning Evelyn s conception of the society s role before moving on to examine the myriad of details included in the plate and their significance It concludes by considering the print s history after publication including the extent to which Evelyn used copies to exemplify the combination of technological and artistic accomplishment to which he believed the society should aspire

Victorian Glassworlds Isobel Armstrong, 2008-04-24 Isobel Armstrong s startlingly original and beautifully illustrated book tells the stories that spring from the mass production of glass in nineteenth century England Moving across technology industry local history architecture literature print culture the visual arts optics and philosophy it will transform our understanding of the Victorian period The mass production of glass in the nineteenth century transformed an ancient material into a modern one at the same time transforming the environment and the nineteenth

century imagination It created a new glass culture hitherto inconceivable Glass culture constituted Victorian modernity It was made from infinite variations of the prefabricated glass panel and the lens The mirror and the window became its formative elements both the texts and constituents of glass culture The glassworlds of the century are heterogeneous They manifest themselves in the technologies of the factory furnace in the myths of Cinderella and her glass slipper circulated in print media in the ideologies of the conservatory as building type in the fantasia of the shopfront in the production of chandeliers in the Crystal Palace and the lens made images of the magic lantern and microscope But they were nevertheless governed by two inescapable conditions First to look through glass was to look through the residues of the breath of an unknown artisan because glass was mass produced by incorporating glassblowing into the division of labour Second literally a new medium glass brought the ambiguity of transparency and the problems of mediation into the everyday It intervened between seer and seen incorporating a modern philosophical problem into bodily experience Thus for poets and novelists glass took on material and ontological political and aesthetic meanings Reading glass forwards into Bauhaus modernism Walter Benjamin overlooked an early phase of glass culture where the languages of glass are different The book charts this phase in three parts Factory archives trade union records and periodicals document the individual manufacturers and artisans who founded glass culture the industrial tourists who described it and the systematic politics of window breaking Part Two culminating in glass under glass at the Crystal Palace reads the glassing of the environment including the mirror the window and controversy round the conservatory and their inscription in poems and novels Part Three explores the lens from optical toys to philosophical instruments as the telescope and microscope were known A meditation on its history and phenomenology Victorian Glassworlds is a poetics of glass for nineteenth century modernity *Haeckel, His Life and Work* Wilhelm Bölsche,1906

Alfred Vendl,Martina R. Fröschl,2023-10-04 40 years of science visualization The visualization of often encrypted data reveals new previously hidden but quite real worlds to humankind Art adopts these insights and uses them to create new dimensions This book brings together a wide range of contributions on visualization in science media and art Renowned experts and associates of the Science Visualization Lab at the University of Applied Arts Vienna present examples of outstanding and innovative visualization projects and provide insight into their working methods The book follows a variety of approaches to expanding perception and rendering the invisible visible If the doors of perception were cleansed every thing would appear to man as it is infinite William Blake Insight into the thinking and working methods of renowned scientists media experts and artists Lavish publication with numerous illustrations and AR features With contributions by Ina Conradi Mark Chavez Christian K berl Walter K hler Thomas Matzek Markus M ller Ruth Schnell Victoria Vesna James K Gimzewski Manfred Wakolbinger and others **American Scientist** ,1942 **The Rise of Early Modern Science** Toby E. Huff,2017-06-06

Now in its third edition The Rise of Early Modern Science argues that to understand why modern science arose in the West it is essential to study not only the technical aspects of scientific thought but also the religious legal and institutional arrangements that either opened the doors for enquiry or restricted scientific investigations Toby E Huff explores how the newly invented universities of the twelfth and thirteenth centuries and the European legal revolution created a neutral space that gave birth to the scientific revolution Including expanded comparative analysis of the European Islamic and Chinese legal systems Huff now responds to the debates of the last decade to explain why the Western world was set apart from other civilisations **Reflections On Evolution** Frederick Sproull,2017-07-07 Evolution is a scientific theory asserting that species

of organisms are capable of changing through time into different species Present day species are thought to share common ancestors and genetic continuity with species that lived in the past Evolution replaced an ancient view that species are basically static over time not capable of significant change Although Darwin was not the first to propose evolutionary views he initiated a rapid paradigm shift Within twelve years after publication of his On Origin of the Species in 1859 evolution became the predominant explanation by most mainstream Western intellectuals for how living organisms got here Many scholars believe that evolution in any recognizable form only emerged in the eighteenth century associated with a broader philosophy of progress and it continued to be strongly associated with that philosophy and ideology until the middle of the

twentieth century Even today remnants of that association still survive Evolution has always been culturally and ideologically linked This linkage is so strong that evolution has been used in this work as a model to make a point that science is a social enterprise directly influenced by its cultural milieu Such analysis rejects the more popular view that science is or can be merely a dispassionate search for the truth detached from any cultural norm or ideology Evolution has always had wide ranging implications it is an idea that reverberates far beyond science One reason for this is that it removes humans and other living organisms from the status of being directly and specially created by God Increasingly since Darwin evolution explains the history of life in a materialistic way freeing biology from theological constraints on the important question of how species got here By detaching biology from the supernatural evolution allowed biology to become modern science Evolution also acts as one of the few unifying concepts in biology bringing biology's many disparate areas together into a cohesive scientific discipline Recent developments in science and technology many in the area of molecular biology have resulted in the emergence of a new understanding of evolutionary mechanisms and they are providing deeper insight into the unity of living organisms and how biological novelty emerges As incredible as these advances are they have not silenced the religious debates that have historically been associated with evolution These debates have continued into the twenty first century However evolution is not necessarily at odds with religion At least since Darwin mainstream religions in the West have accommodated at least some form of it This work attempts to place twenty first century evolution into a historical and ideological context New scientific ideas and discoveries that have shaped and are shaping evolution are discussed within this framework Also discussed are how these discoveries are transforming contradicting and reshaping traditional Darwinism and new synthesis evolutionary thought
