Leyva-Vázquez, 2024-12-16 This volume contains the proceedings of the conference held at the University of Guayaquil on November 28 and 29 2024 featuring contributions from researchers representing Colombia Cuba Ecuador Spain the United States Greece Japan Mexico and Peru The conference focused on SuperHyperStructures and Applied Neutrosophic Theories commemorating the 30th anniversary of neutrosophic theories and their extensive applications The topic of SuperHyperStructures and Neutrosophic SuperHyperStructures explores advanced mathematical frameworks built on powersets of a set extending to higher orders SuperHyperStructures are constructed using all non empty subsets of while Neutrosophic SuperHyperStructures incorporate the empty set representing indeterminacy These structures model real world systems where elements are organized hierarchically from sets to sub sets and beyond enabling the analysis of complex and indeterminate relationships

Neutrosophic Sets and Systems, Vol. 34, 2020. Special Issue: Social Neutrosophy in Latin America Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva Vazquez, Neutrosophy as science has inclusive attributes that make possible to extract the contributions of neutral values in the analysis of data sets it builds a unified field of logic for transdisciplinary studies that transcend the boundaries between natural and social sciences Neutral philosophy seeks to solve the problems of indeterminacy that appear universally to reform the current natural or social sciences with an open methodology to promote innovation The research products related in this special issue start from the premise that the difficulty is not the complexity of the social environment but the instrumental obsolescence to observe interpret and manage that complexity there are bold approaches and proposals for valid solutions that come to enrich the universe of resolution through the use of neutral methods In the last year the use of tools related to neutrosophy and its application to the social sciences modeling of social phenomena based on simulation agents problems associated with health psychology education environmental management and sustainability solutions and legal sciences has increased in the events organized by the Asociacion Latinoamericana de Ciencias Neutrosóficas ALCN in Spanish The methods of higher incidence are cognitive maps neutral Iadovs neutral Delphi analytical hierarchy process methods neutral statistics neutral personality models among the most significant In this special issue there is a predominance of research from Ecuadorian universities demonstrating how neutrosophy and its methods are consolidated as instruments of analysis inference and research validation

Recent Developments in Decision Support Systems Clyde W. Holsapple, Andrew B. Winston, 2013-06-29 Over the past two decades many advances have been made in the decision support system DSS field They range from progress in fundamental concepts to improved techniques and methods to widespread use of commercial software for DSS development Still the depth and breadth of the DSS field continues to grow fueled by the need to better support decision making in a world that is increasingly complex in terms of volume diversity and interconnectedness of the knowledge on which decisions can be based This continuing growth is facilitated by increasing computer power and decreasing per unit computing costs But it is spearheaded by the multifaceted efforts of DSS researchers The collective work of these researchers runs from the speculative to the normative to the descriptive It includes analysis of what the field needs designs of means for meeting recognized needs and implementations for study It encompasses theoretical empirical and applied orientations It is concerned with the invention of concepts frameworks models and languages for giving varied helpful perspectives It involves the discovery of principles methods and techniques for expeditious construction of successful DSSs It aims to create computer based tools that facilitate DSS development It assesses DSS efficacy by observing systems their developers and their users This growing body of research continues to be fleshed out and take shape on a strong but still developing skeletal foundation **Neutrosophic Sets and Systems, vol. 60/2023** Florentin Smarandache, Mohamed Abdel-Basset, Said Broumi, 2023-10-15

Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc Neutrosophy is a new branch of philosophy that studies the origin nature and scope of neutralities as well as their interactions with different ideational spectra This theory considers every notion or idea together with its opposite or negation and with their spectrum of neutralities in between them i e notions or ideas supporting neither nor The and ideas together are referred to as Neutrosophy is a generalization of Hegel s dialectics the last one is based on and only According to this theory every idea tends to be neutralized and balanced by and ideas as a state of equilibrium In a classical way are disjoint two by two But

since in many cases the borders between notions are vague imprecise Sorites it is possible that and of course have common parts two by two or even all three of them as well

Development of Accounting and Auditing Systems in China

Xu-Dong Ji, 2017-10-05 This title was first published in 2001 In 1979 China opened the door to the West and implemented a series of economic reforms that led the accounting system to depart from the Soviet model This book investigates the development of Chinese accounting in a broad social economic and cultural environment and analyzes the environmental influences on the development of accounting in China Including the latest accounting systems which have to date received little scholarly attention this cutting edge analysis makes a worthy addition to a growing area of research

Intelligent Systems, Business, and Innovation Research Rim El Khoury, Nohade Nasrallah, 2024-01-25 Intelligent systems research is a multidisciplinary field that focuses on the development of systems that can perceive reason and act autonomously This can include areas such as machine learning artificial intelligence natural language processing and robotics The goal of intelligent systems research is to develop systems that can understand learn from and adapt to their environment to perform tasks that would typically require human intelligence Business and innovation research is an interdisciplinary field that examines how organizations can create develop and implement new ideas products and services This can include areas such as organizational behaviour strategic management and marketing The goal of business and innovation research is to understand how organizations can foster an environment that encourages creativity and innovation and how they can develop and implement new ideas in a way that leads to success Intelligent Systems Business and Innovation Research is a research area that brings together these two fields to study the use of intelligent systems and technologies in the business context to drive innovation improve operational efficiency and effectiveness of the organization The book aims to understand how intelligent systems can be used in business applications how to design and implement them how to manage the associated challenges and how to leverage them to foster innovation create new business models and gain competitive advantage It offers guidance on how to navigate potential conflicts and challenges that may arise during multidisciplinary research in areas such as Industry 4.0 Internet of Things modern machine learning software agent applications and data science The book focuses on the various fields in which intelligent systems play a critical role in enabling the development of advanced technologies that can perform tasks that would typically require human intelligence For example in smart control systems intelligent algorithms can be used to optimize the performance of machines and devices while in cyber security they can be used to protect networks and data from cyber attacks In bioinformatics intelligent systems can be used to analyse large amounts of biological data while in virtual reality and robotics they can be used to create realistic and responsive simulations and automatons Additionally the book also highlights the rapidly advancing theoretical foundations of fuzzy sets mathematical logic and non classical logic These are important theoretical frameworks for the development of intelligent systems as they provide the foundation for the representation and manipulation of uncertainty complexity and imprecision These theoretical

foundations are essential in the development of intelligent systems that can make decisions and perform tasks in uncertain complex and dynamic environments *ECKM 2021 22nd European Conference on Knowledge Management* Dr Alexeis

Howell,2012-12-06 As we approach the end of the 20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves The technological age has meant that the human being is able to contemplate activities which defy nature For example some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour seven miles above the surface of the earth It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems Air transportation has provided a number of benefits including such disparate examples such as enabling holidays famine relief and the cross fertilisation of cultural practices from other lands Equally there have been undesirable effects such as enabling the means of mass destruction interference in other cultures and the speedy transportation of disease Moreover the physical presence of the aeroplane itself represents the consumption of fossil fuels a source of pollution and a change in the way think about life The view expressed here is of course the view of an inhabitant of the western world

Information Technology Auditing Jagdish Pathak,2005-08-15 An evolving agenda of Information Technology Auditing is subject of this book The author presents various current and future issues in the domain of IT Auditing in both scholarly as well as highly practice driven manner so as to make those issues clear in the mind of an IT auditor The aim of the book is not to delve deep on the technologies but the impact of these technologies on practices and procedures of IT auditors Among the topics are complex integrated information systems enterprise resource planning databases complexities of internal controls and enterprise application integration all seen from an auditor s perspective The book will serve a big purpose of support reference for an auditor dealing with the high tech environment for the first time but also for experienced auditors
