Sustainable Materials and Technologies in VLSI and Information Processing Shashi Kant Dargar, Shilpi Birla, Abha Dargar, Avtar Singh, D. Ganeshaperumal, 2025-05-23 The International Conference on Sustainable Materials and Technologies in VLSI and Information Processing aimed to converge advancements in semiconductor technology with sustainable practices addressing the critical need for eco consciousness in the field of Very Large Scale Integration VLSI and Information Processing The primary purpose of the conference was to explore innovative materials manufacturing processes

and design methodologies that minimize environmental impact while optimizing performance and functionality in electronic devices. Key features of the conference included interdisciplinary discussions on sustainable materials such as biodegradable polymers, low power semiconductor materials and recyclable electronic components. Additionally, it focused on emerging technologies like quantum computing, neuromorphic computing and photonic integrated circuits, exploring their potential contributions to sustainability in VLSI and information processing. The intended audience comprised of researchers, scientists, engineers and industry professionals from academia, government and private sectors involved in semiconductor technology, materials science, environmental sustainability and information processing. What set this conference apart was its unique emphasis on sustainability within the realm of VLSI and information processing. While there are conferences focusing on either semiconductor technology or sustainability separately, this conference bridged the gap between the two, fostering discussions and collaborations that pave the way for greener and more efficient electronic devices and systems.

Process Control provides information pertinent to control hardware including transmitters, controllers, control valves, displays and computer systems. This book presents the control theory and shows how the unit processes of distillation and chemical reaction should be controlled. Organized into eight chapters, this edition begins with an overview of the method needed for the state of the art practice of process control. This text then examines the relative merits of digital and analog displays and computers. Other chapters consider the basic industrial annunciators and other alarm systems which consist of multiple individual alarm points that are connected to a trouble contact, a logic module and a visual indicator. This book discusses as well the data loggers available for process control applications. The final chapter deals with the various pump control systems, the features and designs of variable speed drives and the metering pumps. This book is a valuable resource for engineers.

Intelligent Optimal Control for Distributed Industrial Systems Shaoyuan Li, Yi Zheng, Binqiang Xue, 2023-06-30. This book focuses on the distributed control and estimation of large scale networked distributed systems and the approach of distributed model predictive and moving horizon estimation. Both principles and engineering practice have been addressed with more weight placed on engineering practice. This is achieved by providing an in depth study on several major topics such as the state estimation and control design for the networked system with considering time delay, data drop etc. Distributed MPC design for improving the performance of the overall networked system which includes several classic strategies for different scenarios, details of the application of the distributed model predictive control to smart grid system and distributed water network. The comprehensive and systematic treatment of theoretical and practical issues in distributed MPC for networked systems is one of the major features of the book which is particularly suited for readers who are interested to learn practical solutions in distributed estimation and optimization of distributed networked systems. The book benefits researchers, engineers and graduate students in the fields of chemical engineering, control theory and engineering, electrical and electronic engineering.
