Science Communication Award A glorious guide to the miracle of life's sound The New York Times Book Review A lyrical
exploration of the diverse sounds of our planet the creative processes that produced these marvels and the perils that sonic
diversity now faces We live on a planet alive with song music and speech David Haskell explores how these wonders came to
be In rain forests shimmering with insect sound and swamps pulsing with frog calls we learn about evolution's creative
powers From birds in the Rocky Mountains and on the streets of Paris we discover how animals learn their songs and adapt
to new environments Below the waves we hear our kinship to beings as different as snapping shrimp toadfish and whales In
the startlingly divergent sonic vibes of the animals of different continents we experience the legacies of plate tectonics the
deep history of animal groups and their movements around the world and the quirks of aesthetic evolution Starting with the
origins of animal song and traversing the whole arc of Earth history Haskell illuminates and celebrates the emergence of the
varied sounds of our world In mammoth ivory flutes from Paleolithic caves violins in modern concert halls and electronic
music in earbuds we learn that human music and language belong within this story of ecology and evolution Yet we are also
destroyers now silencing or smothering many of the sounds of the living Earth Haskell takes us to threatened forests noise
filled oceans and loud city streets and shows that sonic crises are not mere losses of sensory ornament Sound is a generative
force and so the erasure of sonic diversity makes the world less creative just and beautiful The appreciation of the beauty and
brokenness of sound is therefore an important guide in today's convulsions and crises of change and inequity *Sounds Wild
and Broken* is an invitation to listen wonder belong and act
