The Urban Imperative Towards Competitive Cities:

The Urban Imperative Edward Ludwig Glaeser, Abha Joshi-Ghani, 2015 Copyright The International Bank for Reconstruction and Development The World Bank Urban Environments in Africa Garth Myers, 2016-02-24 Africa's urban population is growing rapidly raising numerous environmental concerns Urban areas are often linked to poverty as well as power and wealth and hazardous and unhealthy environments as the pace of change stretches local resources Yet there are a wide range of perspectives and possibilities for political analysis of these rapidly changing environments Written by a widely respected author this important book will mark a major new step forward in the study of Africa's urban environments Using innovative research including fieldwork data map analysis place name study interviewing and fiction the book explores environmentalism from a variety of perspectives acknowledging the clash between Western planning mind sets pursuing the goal of sustainable development and the lived realities of residents of often poor informal settlements The book will be valuable to advanced undergraduate and graduate level courses in geography urban studies development studies environmental studies and African studies Densifying the City? Margot Rubin, Alison Todes, Philip Harrison, Alexandra Appelbaum, 2020-11-27 Providing an in depth exploration of the complexities of densification policy and processes this book brings the important experiences of densification in Johannesburg into conversation with a range of cities in Africa the BRICS countries and the Global North It moves beyond the divisive debate over whether densification is good or bad adding nuance and complexity to the calls from multilateral organisations for densification as a key urban strategy Mixed-Use Megaprojects and the Competitive City Mike S. Harris, 2025-04-29 This book examines the motives and outcomes of competitively positioned mixed use megaprojects on government owned land These projects have emerged worldwide in recent decades driven by urban international competition the mobility and expansion of knowledge economies the shift of global investment from physical to human capital and the prevalence of market driven or entrepreneurial politics Six case studies across three countries are analysed through five themes Positioning Governing Shaping Connecting and Public Benefit While pursuing similar objectives of attracting mobile capital each project operates within a specific political financial and social context These projects reflect the prevailing development practices and underlying power structures of cities and states Throughout the implementation process they can also reveal the power struggles and competing agendas within a city In this manner they serve as a valuable lens for understanding the political economic and cultural dynamics of a city and how urban morphology manifests these processes The Routledge Companion to Planning in the Global South Gautam Bhan, Smita Srinivas, Vanessa Watson, 2017-09-11 The Routledge Companion to Planning in the Global South offers an edited collection on planning in parts of the world which more often than not are unrecognised or unmarked in mainstream planning texts In doing so its intention is not to fill a gap that leaves this mainstream unquestioned but to re theorise planning from a deep understanding of place as well as a commitment to recognise the diverse modes of practice that come

within it The chapters thus take the form not of generalised universal analyses and prescriptions but instead are critical and located reflections in thinking about how to plan act and intervene in highly complex city regional and national contexts Chapter authors in this Companion are not all planners or are planners of very different kinds and this diversity ensures a rich variety of insights primarily based on cases to emphasise the complexity of the world in which planning is expected to happen The book is divided into a framing Introduction followed by five sections planning and the state economy and economic actors new drivers of urban change landscapes of citizenship and planning pedagogy This volume will be of interest to all those wanting to explore the complexities of planning practice and the need for new theories of knowledge from which to draw insight to face the challenges of the 21st century The Essential Guide to Critical Development Studies Henry Veltmeyer,Paul Bowles,2021-09-30 The Essential Guide to Critical Development Studies provides an up to date and authoritative introduction to the field challenging mainstream development discourse and the assumptions that underlie it Critical development studies lays bare the economic political social and environmental crises that characterise the current global capitalist system proposing instead systemic change and different pathways for moving beyond capitalism into a new world of genuine progress where economic and social justice and ecological integrity prevail In this book the authors challenge market driven neoliberal development agendas incorporating analyses of class gender race and the dynamics of uneven capitalist development This thoroughly revised and expanded second edition includes 18 new chapters including on topics such as philanthrocapitalism race the energy transition Indigenous resistance and resilience and global health Expanded global coverage including new chapters on South Africa North Africa and the Gulf Arab states A new section on resistance and alternatives Additional pedagogical features including a glossary of key terms discussion questions and expanded guides for further reading This textbook will be essential reading for students of global development political science sociology economics gender studies geography history anthropology agrarian studies international political economy and area studies It will also be an important resource for development researchers practitioners and policymakers

Handbook of Regions and Competitiveness Robert Huggins,Piers Thompson,2017-03-31 The aim of this Handbook is to take stock of regional competitiveness and complementary concepts as a means of presenting a state of the art discussion of the contemporary theories perspectives and empirical explanations that help make sense of the determinants of uneven development across regions Drawing on an international field of leading scholars the book is assembled and organized so that readers can first learn about the theoretical underpinnings of regional competitiveness and development theory before moving on to deeper discussions of key factors and principal elements the emergence of allied concepts empirical applications and the policy context Sustainable Urbanization in India Jenia Mukherjee,2017-10-06 This comprehensive volume contributes to the existing and emerging body of literature on contemporary urbanization and the interactions between cities and the environment The volume is contextualized against latest theories debates and discussions on

sustainable urbanization the post 2015 development agenda of the United Nations and India's official launching of the smart city agenda. Reflecting on three major components of urban sustainability: investments and infrastructures, waste management and urban ecologies, and environmentalisms, it moves beyond the bi-centric approach of only looking into the differences between the developed and the developing world and reflects on cities across India using polycentric methods and approaches. The Indian urban scenario is extremely complex and diverse, and solutions laid out in official and non-official documents tend to miss these complexities. This volume includes innovative research across different parts of India identifying city-specific sources of unsustainability and challenges along with strategies and potentials that would make the process of urban transition both sustainable and equitable. Complex explorations of non-linear bottom-up multisectoral process-based local urban contexts across north, south, east, and west Indian cities in this volume critique a general acceptance of the universalized concept of sustainable urbanization and suggest ways that might be important for transcending inclusive theories to form practical policy-based recommendations and actions.

The Oxford Handbook of the South African Economy Arkebe Oqubay, Fiona Tregenna, Imraan Valodia, 2021-11-18 While sharing some characteristics with other middle-income countries, South Africa is a country with a unique economic history and distinctive economic features. It is a regional economic powerhouse that plays a significant role not only in southern Africa and in the continent but also as a member of BRICS. However, there has been a lack of structural transformation and weak economic growth, and South Africa faces the profound triple challenges of poverty, inequality, and unemployment. Any meaningful debate about economic policies to address these challenges needs to be informed by a deep understanding of historical developments, robust empirical evidence, and rigorous analysis of South Africa's complex economic landscape. This volume seeks to provide a wide-ranging set of original, detailed, and state-of-the-art analytical perspectives that contribute to scientific knowledge as well as to well-informed and productive discourse on the South African economy. While concentrating on the more recent economic issues facing South Africa, the handbook also provides historical and political context. It offers an in-depth examination of strategic issues in the country's key economic sectors and brings together diverse analytical perspectives.

Urban Empires Edward Glaeser, Karima Kourtit, Peter Nijkamp, 2020-09-23 We live in the urban century. Cities all over the world, in both developing and developed countries, display complex evolutionary patterns. *Urban Empires* charts the backgrounds, mechanisms, drivers, and consequences of these radical changes in our contemporary systems from a global perspective and analyses the dominant position of modern cities in the New Urban World. This volume views the drastic change cities have undergone internationally through a broad perspective and considers their emerging roles in our global network society. Chapters from renowned scholars provide advanced analytical contributions, scaling applied and theoretical perspectives on the competitive profile of urban agglomerations in a globalizing world. Together, the volume traces and investigates the economic and political drivers of network cities in a global context and explores the challenges over

governance that are presented by mega cities It also identifies and maps out the new geography of the emergent urban century With contributions from well known and influential scholars from around the world Urban Empires serves as a touchstone for students and researchers keen to explore the scientific and policy needs of cities as they become our age's global power centers
