Treatment And Prevention Of Childhood Sexual Abuse:

Treatment And Prevention Of Childhood Sexual Abuse Sandra A. Burkhardt, Anthony F. Rotatori, 2013-02-01 This practice oriented book provides a model of intervention for sexually abused children. Its approach is that intervention strategy should be based on child generated information. Models of intervention based on adult generated information are ineffective simply because children do not have the cognitive capability of utilising such strategies to prevent or stop abuse. In contrast therapeutic strategies presented in this text emphasising child generated information enable the clinician to assess and understand the vulnerability of sexually abused children in regards to Their Cognitive Level Of Understanding And Their Emotional Reactions. The book guides mental health professionals to acquire information about what and how children think about adults in general and perpetrators in particular. Inventory children's own strategies for responding to perpetrators document children's underlying logic for the strategies they identify and use the information provided by children to guide the selection of treatment and prevention techniques. After the introduction of the topic the book moves on to a discussion of the correlates of child sexual abuse. Information on a systematic research endeavour examining victim vulnerability is then presented as well as children's responses to perpetrators. Other chapters focus on the Burkhardt child generated model of sexual abuse intervention and procedures for assessment. Finally the appendix provides a description of educational and psychological materials on child sexual abuse which can be used for prevention and intervention.

Treatment and Prevention of Childhood Sexual Abuse Sandra A. Burkhardt, Anthony F. Rotatori, 1995 First Published in 1995 Routledge is an imprint of Taylor Francis an informa company [Preventing Child Sexual Abuse](#) Stephen Smallbone, William L. Marshall, Richard Wortley, 2013-05-13 Public policy responses to child sexual abuse are dominated by interventions designed to take effect only after offenders have already begun offending and after children have already been sexually abused. Comparatively little attention has been given to alternative prevention strategies particularly to those aimed at preventing sexual abuse before it might otherwise occur. Considerable knowledge has been accumulated on the characteristics, modus operandi and persistence of offenders, the characteristics, circumstances and outcomes for victims and the physical and social settings in which sexual abuse occurs but little work has been done to systematically apply this knowledge to prevention. This book aims to fulfill this objective through integrating clinical and criminological concepts and knowledge to inform a more comprehensive and effective public policy approach to preventing child sexual abuse. Empirical and theoretical knowledge concerning child sexual abuse is integrated with broader developments in evidence based crime and child maltreatment prevention leading to new ideas about understanding and preventing child sexual abuse. This book will be essential reading for anybody with interests in this field. *The Health Care Setting As A Context for the Prevention and Treatment of Child Abuse* Keith L. Kaufman, 2014-10-13 This special issue was designed to explore the role of health care professionals in the assessment, treatment and prevention of child maltreatment. The initial five articles were solicited to

enhance our understanding of various forms of child maltreatment as well as approaches designed to effectively respond to this difficult problem. The final manuscripts in this issue represent a theoretical and empirical perspective on child maltreatment. Medical settings represent a fertile arena for prevention as well as intervention initiatives. Future research should further support clinical strategies via program evaluation and outcome studies and be aimed at enhancing our knowledge of the field and developing more comprehensive models to guide our efforts. It is hoped that this issue will stimulate research in this area and provide additional support for clinical interventions in the field.

Cumulated Index Medicus ,1984 *Children at Risk* Robert T. Ammerman, Michel Hersen, 2013-03-09 During the past decade a dramatic increase in research and clinical interest has risen in child abuse and neglect This recent growth in awareness is due at least partly to the alarming statistics documenting the incidence of child maltreatment Almost one million children are reported to be abused and neglected each year and many experts believe that this figure underestimates the true incidence Indeed recent surveys suggest that almost 15 million children are the targets of domestic violence every year A significant proportion of these children die as a function of this maltreatment whereas the remainder suffer a variety of short and long term deleterious medical and psychosocial consequences Child maltreatment is a universal problem that has precipitated a mobilization of effort from a variety of disciplines including psychology medicine psychiatry social work sociology and criminology Particular attention has been directed toward the prevention and treatment of child abuse and neglect Such endeavors require the screening of large groups in order to identify families that are at high risk for engaging in such behavior Delineating those characteristics that differentiate high from low risk families and children is one of the obvious priorities for researchers and clinicians in the future This book therefore carefully considers the status of research on risk factors of abuse and neglect in children Added data undoubtedly will have practical value for subsequent intervention efforts
