Paleoclimatology Colin P. Summerhayes, 2020-06-10 Life on our planet depends upon having a climate that changes within narrow limits not too hot for the oceans to boil away nor too cold for the planet to freeze over Over the past billion years Earth s average temperature has stayed close to 14 15 C oscillating between warm greenhouse states and cold icehouse states We live with variation but a variation with limits Paleoclimatology is the science of understanding and explaining those variations those limits and the forces that control them Without that understanding we will not be able to foresee future change accurately as our population grows Our impact on the planet is now equal to a geological force such that many geologists now see us as living

in a new geological era the Anthropocene Paleoclimatology describes Earth's passage through the greenhouse and icehouse worlds of the past 800 million years including the glaciations of Snowball Earth in a world that was then free of land plants It describes the operation of the Earth's thermostat which keeps the planet fit for life and its control by interactions between greenhouse gases land plants chemical weathering continental motions volcanic activity orbital change and solar variability It explains how we arrived at our current understanding of the climate system by reviewing the contributions of scientists since the mid 1700s showing how their ideas were modified as science progressed And it includes reflections based on the author's involvement in palaeoclimatic research The book will transform debate and set the agenda for the next generation of thought about future climate change It will be an invaluable course reference for undergraduate and postgraduate students in geology climatology oceanography and the history of science A real tour de force An outstanding summary not only of the science and what needs to be done but also the challenges that are a consequence of psychological and cultural baggage that threatens not only the survival of our own species but the many others we are eliminating as well Peter Barrett Emeritus Professor of Geology Antarctic Research Centre Victoria University of Wellington New Zealand What a remarkable and wonderful synthesis it will be a wonderful source of paleoclimate information and insights Christopher R Scotese Professor Department of Earth and Planetary Sciences Northwestern University Evanston IL USA [Blueprint for a Methanol Society](#) Junji Nakamura, Masayoshi Ishida, 2025-12-07 This book presents a comprehensive vision for building a carbon neutral society with methanol at its core Part I clarifies the essential challenges of global warming and exposes the shortcomings of current carbon neutral strategies through facts and numbers highlighting the limits of renewables hydrogen and other proposed solutions Part II introduces the concept of a methanol based circular society showing how CO₂ can be recycled into methanol to serve as both an energy carrier and a chemical feedstock Part III explores practical pathways for implementation detailing the roles of technology policy and business in fostering collaboration between industry government and academia while also empowering the next generation to act By combining scientific rigor with a clear roadmap this book provides critical knowledge for policymakers industry leaders researchers and citizens seeking actionable solutions to the climate crisis The English translation of this book originally in Japanese was facilitated by artificial intelligence The content was later revised by the author for accuracy **The Ice at the End of the World** Jon Gertner, 2019 An urgent account of the explorers and scientists racing to understand the rapidly melting ice sheet in Greenland a dramatic harbinger of climate change As Greenland's ice melts and runs off into the sea it not only threatens to affect hundreds of millions of people who live in coastal areas It will also have drastic effects on ocean currents weather systems economies and migration patterns *Climate Changed* Philippe Squarzoni, 2014-04-08 What are the causes and consequences of climate change When the scale is so big can an individual make any difference Documentary diary and masterwork graphic novel this up to date look at our planet and how we live on it explains what global warming is all about With the most complicated concepts made clear in
