Representing Sound Jay Hodgson,Steve

MacLeod,2014-05-28 The first title in the Laurier Digital series Representing Sound elucidates the base technical ontology the machine essence of every recorded musical communication In so doing it suggests the broad contours of an unprecedented theoretical basis for considering recording practice that posits no fundamental relationship between it and live performance Representing Sound thus complicates common conceptions of sound to include different ontological states This seemingly simple notion that the acoustic phenomena we encounter in concert are by nature different from those we

encounter when we listen to records should have profound consequences for the way everyone from musicologists to rock stars considers recording practice In the tradition of books like Marshall McLuhan's and Quentin Fiore's *The Medium Is The Message* 1968 *Representing Sound* sets its text within more than one hundred original visual artworks each designed to reinforce the essay's broader creative resonances This allows readers to approach the larger ontological argument either atomistically i e on a frame by frame basis or holistically depending on their creative or analytic needs In this way *Representing Sound* provides a possible model for creative scholarly work in the impending post book era
