Meissner, 2007 This book is a study of time particularly of the nature of subjective time that is time as subjectively experienced and lived in contrast with time as measured objectively as for example by a clock The argument first addresses the development of the time experience its origins in infantile experience and traces its variations and modifications during the course of the life cycle As the life course advances concerns about and preoccupations with death play an increasingly important role in attitudes toward and involvement in temporally related contexts The next step is an examination of the phenomenology of time experience itself and its dependence on biorhythms and affective influences An important aspect of this discussion is the relation between time experience as a conscious phenomenon and the functioning of unconscious determinants of the time experience This leads to the question given these conclusions regarding the nature of time experience what implications can we draw for the understanding of the nature and functioning of the self within psychoanalysis The book s final section applies these understandings to the analytic process focusing particularly on the meaning of the time experience in the patient s psychic reality and patterns of enactment around issues of time and time management in the analytic situation **Magic Search** Rebecca S.
