The Egyptian Oracle Project Robyn Gillam,Jeffrey Jacobson,2015-07-30 For more than 2 000 years between 1500 BCE and 600 CE the Egyptian processional oracle was one of the main points of contact between temple based religion and the general population In a public ceremony a god would indicate its will or answer questions through the movements of a portable cult statue borne by priests or important members of the community The Egyptian Oracle Project is an interactive performance that adapts this ceremony to serve as the basis for a mixed reality educational experience for children and young adults using both virtual reality and live performance The scene is set in a virtual Egyptian temple projected onto a wall An oracle led by a high priest avatar controlled by a live human puppeteer is brought into the presence of a live audience who act in the role of the Egyptian populace Through the mediation of an actress the audience interacts with the avatar recreating the event The series of carefully focused essays in this book provides vital background to this path breaking project in three sections After a brief introduction to educational theatre and virtual reality the first section describes the ancient ceremony and its development along with cross cultural connections Then the development of the script and its performance in the context of mixed reality and educational theatre are examined The final set of essays describes the virtual temple setting in more detail and explores the wider implications of this project for virtual heritage [The VRML 2.0](#)

Virtual Worlds Jean-Claude Heudin, 2003-05-20 1 Introduction Imagine a virtual world with digital creatures that looks like real life sounds like real life and even feels like real life Imagine a virtual world not only with nice three dimensional graphics and animations but also with realistic physical laws and forces This virtual world could be familiar reproducing some parts of our reality or unfamiliar with strange physical laws and artificial life forms As a researcher interested in the sciences of complexity the idea of a conference about virtual worlds emerged from frustration In the last few years there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality The emergence of industry standards such as VRML 1 is an illustration of this growing interest At the same time the field of Artificial Life has addressed and modeled complex phenomena such as self organization reproduction development and evolution of artificial life like systems 2 One of the most popular works in this field has been Tierra designed by Tom Ray an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the energy resource and memory is the material resource 3 Memory is organized into informational patterns that exploit CPU time for self replication Mutation generates new forms and evolution proceeds by natural selection as different creatures compete for CPU time and memory space

The Language of New Media Lev Manovich, 2002-02-22 A stimulating eclectic account of new media that finds its origins in old media particularly the cinema In this book Lev Manovich offers the first systematic and rigorous theory of new media He places new media within the histories of visual and media cultures of the last few centuries He discusses new media's reliance on conventions of old media such as the rectangular frame and mobile camera and shows how new media works create the illusion of reality address the viewer and represent space He also analyzes categories and forms unique to new media such as interface and database Manovich uses concepts from film theory art history literary theory and computer science and also develops new theoretical constructs such as cultural interface spatial montage and cinematography The theory and history of cinema play a particularly important role in the book Among other topics Manovich discusses parallels between the histories of cinema and of new media digital cinema screen and montage in cinema and in new media and historical ties between avant garde film and new media

Third Place Learning Glyn M. Rimmington, Mara Alagic, 2008-06-01 The hybridity and dynamism of today's interconnected interdependent and culturally diverse world poses challenges and opportunities for learning and communication This book introduces an approach to facilitate global learning opportunities while facing these challenges The approach is based on the cage painting metaphor for dialogic co-construction of meaning and understanding of multiple perspectives Resolving disorienting dilemmas or preconceptions requires a dialectic flow of thinking since the root of the problem may lay deep in person's beliefs and values Such experiences might be transformative in their nature causing change in person's perspective better understanding the culture of themselves and other people reflective and mindful inquiry into one's worldview the third place processes

Misunderstandings are more prevalent when using technology global reach between people from distant locations different cultures To prepare people for these challenges we offer a Web 2.0 based instructional design blueprint Dependent on the context and content of the planned activities the cage painting and global learning processes may be facilitated simultaneously or sequentially The approach presented in this book has attracted interest of educators in different disciplines as well as human resources leaders concerned with key characteristics of today's global business workers intercultural global communication and collaboration The ideas emerged from six years of studying ways in which we and our colleagues from 25 other countries integrated global learning into classrooms in a range of discipline areas In this book we explore the competences needed to communicate interculturally and avoid the effects of preconceptions on our communication and collaboration We review metaphors commonly used in intercultural communication and then introduce a new metaphor called Cage Painting The process of Cage Painting requires certain conditions during intercultural communication whether it is face to face or via global reach using technology The transformative processes that we undergo as we confront cultural disorienting dilemmas smiling being a simple example of one are named the Third Place

Nuclease Methods and Protocols Catherine H. Schein, 2008-02-03 Nucleases enzymes that restructure or degrade nucleic acid polymers are vital to the control of every area of metabolism They range from housekeeping enzymes with broad substrate ranges to extremely specific tools 1 Many types of nucleases are used in lab protocols and their commercial and clinical uses are expanding The purpose of Nuclease Methods and Protocols is to introduce the reader to some we characterized protein nucleases and the methods used to determine their activity structure interaction with other molecules and physiological role Each chapter begins with a mini review on a specific nuclease or a nuclease related theme Although many chapters cover several topics they were arbitrarily divided into five parts Part I Characterizing Nuclease Activity includes protocols and assays to determine general processive distributive or specific mechanisms Methods to assay nuclease products identify cloned nucleases and determine their physiological role are also included here Part II Inhibitors and Activators of Nucleases summarizes assays for measuring the effects of other proteins and small molecules Many of these inhibitors have clinical relevance Part III Relating Nuclease Structure and Function provides an overview of methods to determine or model the 3D structure of nucleases and their complexes with substrates and inhibitors A 3D structure can greatly aid the rational design of nucleases and inhibitors for specific purposes Part IV Nucleases in the Clinic summarizes assays and protocols suitable for use with tissues and for nuclease based therapeutics

Playing with the Past Erik Champion, 2010-09-28 How can we increase awareness and understanding of other cultures using interactive digital visualizations of past civilizations In order to answer the above question this book first examines the needs and requirements of virtual travelers and virtual tourists Is there a market for virtual travel Erik Champion examines the overall success of current virtual environments especially the phenomenon of computer gaming Why are computer games and simulations so much more successful than other types of

virtual environments Arguments that virtual environments are impeded by technological constraints or by a paucity of evaluation studies can only be partially correct for computer games and simulations are also virtual environments Many of the underlying issues are caused by a lack of engagement with the philosophical underpinnings of culture presence and inhabitation and there are few exemplars that engage the public with history and heritage using interactive media in a meaningful and relevant manner The intention of *Playing With the Past* is to help designers and critics understand the issues involved in creating virtual environments that promote and disseminate historical learning and cultural heritage through a close study of the interactive design principles at work behind both real and virtual places Topics discussed include the design of virtual environments and especially virtual heritage environments virtual place making cultural presence the pros and cons of game style interaction augmented reality projects and appropriate evaluation methods Virtual heritage environments discussed in the book include projects from Antarctica Australia Mexico Malta Egypt Babylon the Netherlands Cambodia and India

Complex Engineered Systems Dan Braha,Ali A. Minai,Yaneer Bar-Yam,2007-06-24 Recent advances in science and technology have led to a rapid increase in the complexity of most engineered systems In many notable cases this change has been a qualitative one rather than merely one of magnitude A new class of Complex Engineered Systems CES has emerged as a result of technologies such as the Internet GPS wireless networking micro robotics MEMS fiber optics and nanotechnology These complex engineered systems are composed of many heterogeneous subsystems and are characterized by observable complex behaviors that emerge as a result of nonlinear spatio temporal interactions among the subsystems at several levels of organization and abstraction Examples of such systems include the World Wide Web air and ground traffic networks distributed manufacturing environments and globally distributed supply networks as well as new paradigms such as self organizing sensor networks self configuring robots swarms of autonomous aircraft smart materials and structures and self organizing computers Understanding designing building and controlling such complex systems is going to be a central challenge for engineers in the coming decades

Chemoinformatics Jürgen Bajorath,2008-02-04 In the literature several terms are used synonymously to name the topic of this book chem chemi or chemo informatics A widely recognized definition of this discipline is the one by Frank Brown from 1998 1 who defined chemoinformatics as the combination of all the information resources that a scientist needs to optimize the properties of a ligand to become a drug In Brown s definition two aspects play a fundamentally important role design support by computational means and drug discovery which distinguishes it from the term chemical informatics that was introduced at least ten years earlier and described as the application of information technology to chemistry not with a specific focus on drug discovery In addition there is of course chemometrics which is generally understood as the application of statistical methods to chemical data and the derivation of relevant

statistical models and descriptors 2 The pharmaceutical focus of many developments and efforts in this area and the current popularity of gene to drug or si lar paradigms is further reflected by the recent introduction of such terms as discovery informatics 3 which takes into account that gaining knowledge from chemical data alone is not sufficient to be ultimately successful in drug discovery Such insights are well in accord with other views that the boundaries between bio and chemoinformatics are fluid and that these disciplines should be closely combined or merged to significantly impact biotechnology or pharmaceutical research 4
